**GLOSSARY** ......................................................................................... 76
California, as recognized by the United States Supreme Court, has been a pioneer in cannabis regulation. In 1913, California was one of the first states to prohibit the sale and possession of cannabis. At the time, the legislation referred to the drug as "loco-weed." Eighty-three years later in 1996, California became the first state to authorize the use of "marijuana" for medicinal purposes. Today, the adult use of cannabis for non-medicinal purposes has been decriminalized in California. The State licenses the commercial cannabis businesses, and the industry is regulated from seed to sale. In 2020, it is estimated that cannabis sales in the State hit $4.4 billion.

In that same pioneering spirit, the Cannabis Regulation Committee (Committee) of the League of California Cities City Attorneys Department is pleased to present the first edition of Seed to Sale: A Guide to Regulating Cannabis in California Cities (Guide), which is intended to assist municipal attorneys in addressing legal issues related to cannabis regulation. Cannabis issues are particularly challenging for local government due to the lack of legal precedent and constantly evolving laws. For this reason, it is important that municipal attorneys stay abreast of current cases and precedent from other legal fields that can be applied to advise clients and offer solutions as cannabis issues arise. To that end, the Committee offers this Guide as a comprehensive and practical compilation of city attorney experience from throughout California.

The Guide is a starting point for approaching cannabis regulation questions. It is a useful tool to learn about the historical development of cannabis law, understand its current status, and consider practical approaches and tips to handle regulation issues. After this introduction, Part Two provides a historical overview of cannabis law and the regulatory framework at the federal and state level. Part Three presents the Committee’s perspective on regulating cannabis in cities. Part Four examines cannabis-related finance and taxation. Finally, Part Five outlines enforcement tools available for cities.

The Guide will help municipal attorneys better understand the intersectionality of cannabis issues with other relevant fields such as land use, environmental law, taxation, and public health and safety, among others. Equally important, the Guide can be used as a reference to analyze regulation options at the administrative, civil, and criminal levels, to achieve particular goals within a city.
Before you get started, we have one editorial note: Throughout history, the plant with the scientific name of Cannabis Sativa L. has been given many nicknames, some intentionally threatening, others simply amusing. In modern law, the terms “cannabis” and “marijuana” are most widely used, and are often interchangeable. For purposes of this Guide, “cannabis” is the preferred terminology. First, the term cannabis is currently preferred in California law. Second, it is now widely understood that the term “marijuana” has a negative, xenophobic, and racist connotation, stemming back to anti-immigration sentiments beginning in the 20th century. Due to the negative connotation of the word marijuana, the term “cannabis” will be used in this Guide, unless there is a specific reference otherwise (e.g. in the name of a legislative act, or in a quotation or statute).

We hope you find the publication useful in your city’s involvement with cannabis issues. The League of California Cities intends to update this guide periodically to reflect the latest developments in cannabis regulation.

Cannabis Regulation Committee

September 2021
Part 2 — Regulatory Framework

I. EARLY FEDERAL REGULATION

The Federal Government first attempted to regulate the national drug market in 1906 by imposing labeling regulations on medications and prohibiting the manufacture or shipment of any adulterated or misbranded drug in interstate commerce. Subsequent federal drug regulations were generally found in revenue laws, like the Harrison Narcotics Act of 1914, which required producers, distributors, and purchasers of narcotics—specifically cocaine and opiates—to register with the Federal Government, pay taxes, and comply with prescription regulations.

In 1937, when accounts arose of the addictive qualities and physiological effects of “marihuana,” the Federal Government enacted the Marihuana Tax Act. Like the Harrison Act, the Marihuana Tax Act did not prohibit cannabis outright, but required those who import, produce, sell, or deal in the drug to register with the government, pay prohibitively expensive taxes, and comply with burdensome administrative requirements for prescriptions. As a result, even though the Marihuana Tax Act did not declare the drug illegal, it had the practical effect of curtailing the cannabis trade.

II. FEDERAL CONTROLLED SUBSTANCES ACT (CSA)

In the 1970s, federal drug policy underwent a significant transformation. Shortly after taking office, President Nixon declared a national “war on drugs” and Congress enacted the Comprehensive Drug Abuse Prevention and Control Act of 1970. The legislation consolidated various drug laws on the books into a comprehensive statute, provided uniform regulation to prevent diversion into illegal channels, and strengthened law enforcement tools against illegal drug trafficking.

Title II of the Comprehensive Drug Abuse Prevention and Control Act is the Controlled Substances Act (CSA). The CSA categorizes all controlled substances into five schedules based on their accepted medical uses, the potential for abuse, and their psychological and physical effects on the body. Cannabis, or “marihuana” as it is
torted in the CSA, is classified as a Schedule I drug, which means the federal government views cannabis as having high potential for abuse, no accepted medical use, and not safe for use in medically supervised treatment. Because the CSA classifies cannabis as a Schedule I drug, as opposed to listing it on a lesser schedule, the manufacture, distribution, or possession of cannabis is a federal criminal offense, with the sole exception being its use as part of a preapproved research study.

Despite considerable efforts to change the policy, cannabis remains a Schedule I drug. Moreover, the CSA does not recognize a medical necessity defense to its cannabis prohibitions. Accordingly, the manufacture, distribution, or possession of cannabis, even for medicinal purposes, is prohibited under federal law.

The CSA remains enforceable in California, even though these cannabis activities are now allowed by State law. The courts have found that the CSA's cannabis regulations are a valid exercise of Congress' authority under the Commerce Clause, even as applied to purely local cannabis activities allowed by State law. Courts have also upheld enforcement of the CSA's cannabis regulations against a variety of other legal challenges.

At the same time, the CSA explicitly contemplates that states can adopt their own controlled substance regulations, so long as there is not “a positive conflict between [the CSA]... and that state law so that the two cannot consistently stand together.” Indeed, several courts have held that the CSA does not preempt recent California laws allowing cannabis activity. Notably, one court has held that the CSA does not preempt a municipal ordinance requiring medicinal cannabis dispensaries to obtain permits. Another court ruled that, because medicinal cannabis use remains illegal under federal law, the Americans with Disabilities Act of 1990 (ADA) does not protect against discrimination on the basis of medicinal cannabis use, even if that use is in accordance with state law explicitly authorizing such use.

Nevertheless, for many years, the federal government has not been prosecuting cannabis crimes in states where cannabis is legal and the activity is done in accordance with state law. This is
due in large part to: (1) Department of Justice (DOJ) memoranda—most notably the “Cole Memo”\(^\text{24}\)—providing policy guidance to federal prosecutors and law enforcement on where to focus enforcement efforts; and (2) the “Rohrabacher-Farr Amendment.”

1. The Cole Memo told federal prosecutors in states that had legalized cannabis they should use their prosecutorial discretion to focus not on businesses that comply with state regulations, but on illicit enterprises that create harms, like operating with dangerous drug cartels, use of firearms, and distribution to minors. The assumed directive from this memo was that, if a state has legalized cannabis and put in place its own regulatory system, the DOJ should leave those operating within that system alone.

2. The federal budget also contains a provision known as the Rohrabacher-Farr\(^\text{25}\) Amendment, which prevents the Justice Department from using any resources to prosecute state-compliant medicinal cannabis operations in states that have legalized medicinal cannabis. In 2016, the Ninth Circuit Court of Appeal confirmed that while this amendment is in place the DOJ could not spend federal funds to prosecute individuals engaged in conduct permitted by state medicinal cannabis laws.\(^\text{26}\) This amendment is a restriction on the use of federal funds and does not provide immunity from prosecution for federal drug crimes.\(^\text{27}\)

The Rohrabacher-Farr amendment must be renewed annually with the federal budget. Historically, the Rohrabacher-Farr amendment has received bi-partisan support for its inclusion in the federal budget.

In 2018, then-Attorney General Jeff Sessions released his own guidance memorandum (Sessions Memo) on the subject of federal prosecution of cannabis activity and in doing so rescinded the Cole Memo.\(^\text{28}\) While the Sessions Memo removed any perceived safe harbor that may have existed for state-authorized cannabis activity, the Sessions Memo does not direct U.S. Attorneys to prosecute cannabis-related crimes. Essentially, the Sessions Memo removed any de-prioritization for cannabis crimes and reminded U.S. Attorneys that they can use their normal prosecutorial discretion. At the time of writing this Guide, the Biden Administration and current Attorney General, Merrick Garland, have not released updated guidance on federal prosecution of cannabis activity. Nevertheless, California has not seen an uptick of federal enforcement of cannabis activities conducted in compliance with state law since the issuance of the Sessions Memo. The drafters of this Guide have seen nothing at this time to suggest that United States Attorneys in California will prioritize prosecuting state-authorized cannabis activity over the more serious and dangerous crimes they are charged with enforcing.

\(^{25}\) Also referred to more recently as the Rohrabacher-Blumenauer Amendment.

\(^{26}\) U.S. v. McIntosh (2016) 833 F.3d 1163. The California defendants in this case ran four medical marijuana dispensaries in Los Angeles and had nine outdoor cannabis grows in San Francisco and Los Angeles. It appears that the San Francisco U.S. Attorney’s office attempted to prosecute this case, and not the Los Angeles office.

\(^{27}\) Id. at p. 1180, fn. 5.

III. CALIFORNIA UNIFORM CONTROLLED SUBSTANCES ACT (UCSA)

The State has the power to regulate controlled substances in the interest of the public health and welfare.\(^{29}\) Furthermore, Congress expressly provided that the federal CSA does not preempt state regulation of controlled substances like the California Uniform Controlled Substances Act (UCSA).\(^{30}\) Thus, in 1972, shortly after the enactment of the CSA, the State of California consolidated its narcotics laws under the UCSA.\(^{31}\) Chapter 6, Article 2 of the UCSA set forth criminal prohibitions and punishments for the possession, cultivation, transportation, and distribution of cannabis.\(^{32}\)

Only 24 years later, the cannabis regulations in the UCSA would undergo a significant transformation when California voters approved the Compassionate Use Act of 1996.

IV. COMPASSIONATE USE ACT OF 1996 (CUA)

The Compassionate Use Act of 1996 (CUA) was approved by California voters through Proposition 215. The CUA is codified at Health & Safety Code section 11362.5. It provides that certain state criminal laws relating to the possession and cultivation of cannabis “shall not apply to a patient, or to a patient’s primary caregiver, who possesses or cultivates marijuana for the personal medical purposes of the patient upon the written or oral recommendation or approval of a physician.”\(^{33}\)

Thus, qualified patients (or their primary caregiver) may possess and cultivate any amount of cannabis reasonably necessary for the patient’s current medical condition.\(^{34}\) However, the CUA is very limited in scope.

First, the CUA only applies to qualified patients, and their primary caregiver, who have obtained the written or oral recommendation of a physician before cultivating or possessing cannabis, not after.\(^{35}\) A primary caregiver is a defined term with different components.\(^{36}\) A person does not qualify as a primary caregiver merely by having a patient

\(\text{\textsuperscript{30}}\) 21 U.S.C. § 903. (“No provision of this subchapter shall be construed as indicating an intent on the part of the Congress to occupy the field in which that provision operates, including criminal penalties, to the exclusion of any State law on the same subject matter which would otherwise be within the authority of the State, unless there is a positive conflict between that provision of this subchapter and that State law so that the two cannot consistently stand together.”)

\(\text{\textsuperscript{31}}\) Cal. Health & Saf. Code, § 11000, et seq.

\(\text{\textsuperscript{32}}\) Cal. Health & Saf. Code, § 11357 et seq. See, e.g., Cal. Health & Saf. Code, §§ 11357 [possession of cannabis is a misdemeanor], 11358 [cultivation of cannabis is a felony], 11359 [possession with intent to sell any amount of cannabis is a felony], 11360 [transporting, selling, or giving away cannabis in California is a felony; under 28.5 grams is a misdemeanor], 11361 [selling or distributing cannabis to minors, or using a minor to transport, sell, or give away cannabis, is a felony].

\(\text{\textsuperscript{33}}\) Health & Saf. Code, § 11362.5, subd. (d).

\(\text{\textsuperscript{36}}\) Health & Saf. Code, § 11362.5, subd. (e).
designate him or her as such or by the provision of medicinal cannabis itself.37

Second, the CUA is narrowly drafted to limit cannabis use for the patient’s own personal medical purposes.38 While a primary caregiver could care for and cultivate more than one patient’s cannabis, the CUA does not allow patients and their caregivers to “pool talents, efforts, and money to create a stockpile of marijuana that is to be collectively distributed.”39 The CUA does not authorize, or even mention, medicinal cannabis dispensaries. Collectives and cooperatives were only authorized years later in the Medical Marijuana Program Act (MMPA).

Third, the CUA does not decriminalize all medicinal cannabis-related conduct; it grants a defendant a limited immunity from prosecution, allowing for a motion to set aside an indictment or information prior to trial.40 Such decriminalization only applies to cultivation and possession. The CUA does not provide a defense to other cannabis-related conduct, such as transportation or sale.41 Because the CUA does not actually “legalize” cannabis, but only determines that no punishment will be imposed on certain cannabis offenses under state law, the CUA is not preempted by the federal CSA.42

The modest and narrow immunity provisions of the CUA, while groundbreaking for its time, limited its effect on other issues. Despite the language of the findings and declarations evincing an intent to “ensure that seriously ill Californians have the right to obtain and use marijuana for medical purposes,” courts held that the CUA did not create “a broad right to use marijuana without hindrance or inconvenience.”44 The CUA does not require an employer to accommodate an employee’s use of medicinal cannabis.45

Notably, more recently enacted California laws authorizing various cannabis activities—such as the Medical Marijuana Program Act in 2003 (MMPA), the Control, Regulate and Tax Adult Use of Marijuana Act in 2016 (AUMA), and the Medicinal and Adult-Use Cannabis Regulation and Safety Act in 2017 (MAUCRSA), discussed below—may have rendered complete reliance on the CUA as a defense to cannabis-related charges somewhat unnecessary.

V. MEDICAL MARIJUANA PROGRAM ACT (MMPA)

In 2003, the California Legislature passed the MMPA46 to “implement a plan to provide for the safe and affordable distribution of marijuana to all patients in need of medical marijuana,” as

37 Ibid. See also People v. Hochanadel (2009) 176 Cal.App.4th 997, 1016 (“Individuals operating a marijuana-buying cooperative do not, by providing medical patients with medicinal marijuana, consistently assume responsibility for the health of those patients.”).
39 Ibid.
41 People v. Young (2001) 92 Cal.App.4th 229, 235-237; People v. Trippet (1997) 56 Cal.App.4th 1532, 1550-1551 (the CUA only provides an implied defense to transportation of cannabis when “the quantity transported and the method, timing and distance of the transportation are reasonably related to the patient’s current medical needs.”).
45 Id. at p. 931.
46 Health & Saf. Code, § 11362.7 et seq.
expressed by the voters in the CUA.\textsuperscript{47} The MMPA's intent was to:

\begin{itemize}
  \item \textbf{a.} Clarify the scope of the CUA and facilitate the prompt identification of qualified patients and their designated primary caregivers to avoid unnecessary arrests and provide needed guidance to law enforcement officers;
  
  \item \textbf{b.} Promote uniform and consistent application of the CUA;
  
  \item \textbf{c.} Enhance the access of patients and caregivers to medicinal cannabis through collective, cooperative cultivation projects; and
  
  \item \textbf{d.} Address additional issues not included within the CUA.\textsuperscript{48}
\end{itemize}

The MMPA creates a voluntary program for issuing identification cards to qualified patients and their primary caregivers. Under the MMPA, the California Department of Health Services is required to establish and maintain a program under which qualified applicants may apply for a California identification card, to be annually renewed, identifying them as qualified for exemptions. County health departments are mandated to operate the program under state protocols. The program is also designed to provide law enforcement with a method to immediately verify the validity of identification cards.\textsuperscript{49}

The MMPA expressly immunizes qualified persons with identification cards who transport or possess cannabis for their personal medicinal use.\textsuperscript{50} Qualified caregivers (and those who provide assistance to the patient or caregivers) who transport, process, administer, deliver, or give away cannabis for medicinal purposes to qualified patients or other caregivers are also expressly immunized under the statute.\textsuperscript{51} In contrast to MAUCRSA, which restricts adult-use cannabis to persons age 21 and up, the MMPA does not include an age restriction. Therefore, persons ages 18-20 may be qualified patients and, therefore, obtain medicinal cannabis. In addition, minors may obtain medicinal cannabis with parental consent.\textsuperscript{52}

Section 11362.775 of the MMPA also provided that qualified persons with valid identification cards, and their designated primary caregivers, who associate “collectively or cooperatively” to cultivate cannabis for medicinal purposes, could not be subject to state criminal law sanctions, including for the sale of cannabis, solely on that basis.\textsuperscript{53} However, in January 2019, MAUCRSA repealed Section 11362.775; accordingly, today collectives and cooperatives are subject to the same state and local licensing and permitting provisions as any other license or permit applicant.

\textsuperscript{47} Health & Saf. Code § 11362.5, subd. (b)(1)(C).
\textsuperscript{48} Stats. 2003, Ch. 875, §1, subd. (b)–(c).
\textsuperscript{49} Health & Saf. Code, §§ 11362.71, 11362.72.
\textsuperscript{50} Health & Saf. Code § 11362.765, subd. (b)(1)–(2).
\textsuperscript{51} Health & Saf. Code § 11362.765, subd. (b)(2)–(3).
\textsuperscript{52} Health & Saf. Code § 11362.7, subd. (e).
\textsuperscript{53} Former Health & Saf. Code, § 11362.775. Courts of appeal reached varying conclusions regarding whether former Health & Safety Code, section 11362.775 immunized the sale and distribution of medicinal cannabis or whether it protected only collective cultivation. (Compare In People ex rel Trutanich v. Joseph (2012) 204 Cal.App.4th 1512 [holding that the statute protects group activity only to cultivate cannabis for medicinal purposes; it does not immunize dispensing or selling cannabis] with People v. Jackson (2012) 210 Cal. App.4th 525 [expressly rejecting the Joseph court’s interpretation]).
While the MMPA also established limits on the quantity of cannabis that qualified persons and primary caregivers could possess, the California Supreme Court struck down the quantitative limitations holding that the Legislature did not have the authority to amend the initiated state statute in that manner.\(^\text{54}\) Nevertheless, the section was not removed from the MMPA.\(^\text{55}\)

The first published decision following the MMPA’s passage found that the MMPA “represent[ed] a dramatic change in the prohibitions on the use, distribution, and cultivation of marijuana for persons who are qualified patients or primary caregivers...”\(^\text{56}\) Despite this broad pronouncement regarding the MMPA’s purpose, the California Supreme Court has narrowly interpreted the additional immunities conferred by the MMPA.\(^\text{57}\)

VI. CALIFORNIA ATTORNEY GENERAL GUIDELINES

The MMPA required the Attorney General to “develop and adopt appropriate guidelines to ensure the security and non-diversion of marijuana grown for medical use by patients qualified under the [CUA].”\(^\text{58}\) The Attorney General adopted such guidelines in August 2008 (2008 Guidelines).\(^\text{59}\) The purpose of the 2008 Guidelines was to: (1) ensure that cannabis grown for medicinal purposes remains secure and does not find its way to nonpatients or illicit markets, (2) help law enforcement agencies perform their duties effectively and in accordance with California law, and (3) help patients and primary caregivers understand how they may cultivate, transport, possess, and use medicinal cannabis under California law. Although the 2008 Guidelines are not binding, many courts have afforded them great weight and have relied on them in resolving medicinal cannabis issues.\(^\text{60}\) The 2008 Guidelines were also helpful in articulating the appropriate degree of local regulation of medicinal cannabis dispensaries, a novel land use that proliferated throughout the state after the adoption of the CUA and MMPA.

On August 6, 2019, the Attorney General released updated “Guidelines for the Security and Non-Diversion of Cannabis Grown for Medicinal Use” (2019 Guidelines).\(^\text{61}\) The 2019 Guidelines provide a helpful summary of applicable law, with compliance and enforcement recommendations for individual qualified persons and primary caregivers, as well as for collectives and cooperatives, which under MAURCSA, are required to obtain state licenses to operate.

55 Id. at pp. 1047-1048.
57 See City of Riverside v. Inland Empire Patients Health & Wellness Ctr., Inc. (2013) 56 Cal.4th 729, 744 (acknowledging MMPA’s “limited reach” and holding that it did not preempt local zoning regulations). See also, People v. Mentch (2008) 45 Cal.4th 274, 290 (while MMPA does convey additional immunities against cultivation and possession-for-sale charges to specific groups of people, it does so only for specific actions).
58 Health & Saf. Code § 11362.81, subd. (d).
Part 2 — Regulatory Framework

VII. CONTROL REGULATE AND TAX ADULT USE OF MARIJUANA ACT (PROPOSITION 64 OR AUMA)

On November 8, 2016, California voters approved Proposition 64, the initiative known as the Control, Regulate and Tax Adult Use of Marijuana Act (AUMA). Unlike the earlier cannabis legalization framework in Colorado, AUMA did not modify the California Constitution; instead, it enacted and modified a variety of state statutes.62

Section 3 of the ballot initiative set forth its 27 distinct purposes, which can be a guiding resource in understanding the voters’ intent.63 The statements of purpose and intent generally relate to state regulation, local control, taxation, public safety, public health, and enforcement.64 In addition to reducing criminal penalties for cannabis-related offenses,65 and providing funding for cannabis-related research and social programs,66 AUMA established a comprehensive system to legalize, control, and regulate the cultivation, processing, manufacture, distribution, testing, and sale of nonmedicinal cannabis and cannabis products, for use by adults 21 years and older, and to tax the commercial growth and retail sale of cannabis.67

A. State Agencies

AUMA created a complex regulatory and licensing scheme for commercial cannabis activities, designating three main licensing authorities and providing several other state agencies with specific authority and responsibilities related to cannabis. This regulatory scheme was in effect until July 12, 2021, when the Governor signed AB 141, consolidating the three existing agencies charged with licensing of commercial cannabis under AUMA and creating the Department of Cannabis Control. A summary of AB 141 and the Department of Cannabis Control (DCC) may be found in Section IX of Part II of this Guide.

1. Licensing Authorities

The three agencies charged with licensing of commercial cannabis under AUMA were the Bureau of Cannabis Control, within the California Department of Consumer Affairs; the California Department of Food and Agriculture; and the California Department of Public Health.68 Each of the three licensing authorities was charged with making reasonable rules and regulations to

62 See e.g., Health & Saf. Code, § 11362.1 et seq.; Bus. & Prof. Code, § 26000 et seq.
63 Proposition 64, section 3 (Nov. 9, 2016), available at: https://www.oag.ca.gov/system/files/initiatives/pdfs/15-0103%20%28Marijuana%29_1.pdf
64 Proposition 64, section 3, subd. (a) – (aa) (Nov. 9, 2016), available at: https://www.oag.ca.gov/system/files/initiatives/pdfs/15-0103%20%28Marijuana%29_1.pdf
65 Health & Saf. Code, § 11357 et seq.
67 AUMA uses the term “marijuana”; the Medicinal and Adult-Use Cannabis Regulation and Safety Act (MAUCRSA), effective June 27, 2017 and discussed in Chapter Six, incorporated many of AUMA’s provisions; MAUCRSA also substituted the term “cannabis” for “marijuana.” This chapter uses the term “marijuana” when referring to specific aspects of AUMA; it uses the term “cannabis” for generic reference.
68 Bus. & Prof. Code, § 26012.
implement, administer, and enforce their respective duties.\(^69\), \(^70\)

**a. Bureau of Cannabis Control (Bureau)**

The Bureau was the lead agency tasked with regulating commercial cannabis licenses for medicinal and adult-use cannabis.\(^71\) AUMA gave the Bureau exclusive authority for creating, issuing, denying, renewing, disciplining, suspending, or revoking state licenses for transportation, storage unrelated to manufacturing activities, and distribution and sale of cannabis and cannabis products.\(^72\)

**b. California Department of Food and Agriculture (CDFA)**

CDFA was responsible for licensing the commercial cultivation of cannabis.\(^73\) CDFA was also responsible for the track-and-trace system, which tracks the movement of cannabis and cannabis products throughout the distribution chain in California. CalCannabis Cultivation Licensing, a division of CDFA, was organized into two branches: the Licensing Branch and Compliance and Enforcement Branch.

CDFA’s licensing included conditions from the California Department of Fish and Wildlife (CDFW) and the State Water Resources Control Board (SWRCB) related to the individual and cumulative effects of water diversion and the discharge associated with cultivation.\(^74\)

**c. California Department of Public Health (CDPH)**

The California Department of Public Health was responsible for licensing and regulating all commercial cannabis manufacturing in California.\(^75\) This included ensuring commercial cannabis manufacturers operate safe, sanitary workplaces and follow good manufacturing practices to produce products that are free of contaminants, meet product guidelines, and are properly packaged and labeled.

### 2. Marijuana Control Appeals Panel

AUMA created the Marijuana Control Appeals Panel, which is responsible for hearing appeals of any decision by state cannabis licensing authorities relating to any penalty assessment or the issuing, denying, transferring, conditioning, suspending, or revoking of a cannabis license.\(^76\) The Panel’s review is based on a “substantial evidence” standard;\(^77\) the Panel’s decision may be reviewed in court.\(^78\) To implement its mandate, the Panel has adopted regulations, which can be found online.\(^79\)

---

\(^69\) Bus. & Prof. Code, § 26013.

\(^70\) The DCC is expected to post consolidated regulations of the three former agencies in early 2022 at cannabis.ca.gov.

\(^71\) The Bureau was originally called the Bureau of Medical Marijuana, then renamed the Bureau of Marijuana Control by AUMA, and finally acquired its current title of Bureau of Cannabis Control under MAUCRSA. (See Bus. & Prof. Code, § 26010, subd. (a).)

\(^72\) MAUCRSA subsequently transferred to the Bureau licensing authority as to microbusinesses and testing. (See Bus. & Prof. Code, § 26012, subd. (a)(1).)

\(^73\) Bus. & Prof. Code, § 26012, subd. (a)(2).

\(^74\) Bus. & Prof. Code, § 26040(c).

\(^75\) AUMA initially delegated licenses for testing to CDPH the authority as to testing; MAUCRSA moved the testing to the Bureau. (Cal. Bus. & Prof. Code, §26012, subd. (a)(3).)

\(^76\) Bus. & Prof. Code, §26040 et seq.

\(^77\) Bus. & Prof. Code, § 26043.

\(^78\) Bus. & Prof. Code, § 26045.

\(^79\) https://www.ccap.ca.gov/laws_regs/ccr_6000_6018_code.pdf
### 3. California Department of Pesticide Regulation (CDPR)

CDPR is responsible for developing guidelines for the use of pesticides in the cultivation of cannabis and residue in harvested cannabis. This included coordination with CDFA. In practice, CDPR focuses on three main areas: (1) providing statewide guidance on the use of pesticides in the cultivation of cannabis, and residue in harvested cannabis; (2) providing guidance to the Bureau on testing for pesticides; and (3) requiring that pesticides being applied to cannabis comply with food and agriculture standards. Pesticide products can be legally used on cannabis in California, provided they meet certain criteria approved by CDPR. The criteria can be found online. CDPR will continue its work, coordinating with DCC after the consolidation of the licensing agencies.

### 4. Other State Agencies

State agencies — including, but not limited to the State Board of Forestry and Fire Protection (Cal Fire), the California Department of Fish and Wildlife (CDFW), and the State Water Resources Control Board (SWRCB), the California regional water quality control boards (Water Boards), and state law enforcement agencies — are required to address environmental impacts of cannabis cultivation and coordinate, when appropriate, with cities and counties in enforcement efforts.

### 5. Cannabis Advisory Committee

The Bureau was charged with creating a committee to advise the then-existing licensing authorities (the Bureau, CDPH, and CDFA) on the development of regulations that help protect public health and safety, and reduce the illegal market for cannabis. State statutes dictated that members of the Committee must include, among others, representatives of local agencies.

The Committee is required to publish an annual public report describing its activities including, but not limited to, the recommendations the Committee made to the licensing authorities during the immediately preceding calendar year and whether those recommendations were implemented by the licensing agencies. The Committee’s annual report was published on the Bureau’s website: bcc.ca.gov, and will be transitioned to the new DCC website cannabis.ca.gov.

### B. Types of Licenses under AUMA

Under AUMA, there are 19 types of cannabis-related licenses. This list was revised and expanded under MAUCRSA and is discussed in more detail below.

---

80 Bus. & Prof. Code, §§ 26060, subds. (b) and (e), renumbered and modified as Bus. & Prof. Code, §§ 26060, subds. (d) and (g) by MAUCRSA. SWRCB has regulatory authority for adopting principles and guidelines for diversion and use of water for cannabis cultivation, in consultation with CDFW. (Cal. Wat. Code, §13149.) SWRCB has primary enforcement but is required to notify the CDFA of any enforcement action taken for violations. (Wat. Code, § 13149.)

81 [https://www.cdpr.ca.gov/docs/cannabis/certain_criteria.pdf](https://www.cdpr.ca.gov/docs/cannabis/certain_criteria.pdf)

82 Bus. & Prof. Code, § 26066.

83 Bus. & Prof. Code, § 26014, subd. (a).

84 Bus. & Prof. Code, § 26014, subd. (b).

85 Bus. & Prof. Code, § 26014, subd. (c).

86 MAUCRSA added License Type 1C, Cultivation, Specialty cottage, Small (Bus. & Prof. Code, § 26050), MAUCRSA also authorized each licensing authority to create additional licenses. (Bus. & Prof. Code, § 26012, subd. (b).)
Part 2 — Regulatory Framework

C. Local Control and Regulation

1. Personal Use of Cannabis

AUMA legalized persons age 21 or older smoking or ingesting cannabis or cannabis-related products under California law. AUMA also provided that a person age 21 or older has a right to plant, cultivate, harvest, dry, or process up to six living cannabis plants, subject to reasonable local regulation. Although a city cannot prohibit these activities inside a private residence or accessory structure that is fully enclosed, secured, and located at a private residence, cities can ban these activities when done outdoors, even upon the grounds of a private residence. Generally speaking, cannabis cannot be smoked or ingested in public.

AUMA also legalized a person’s ability to possess, process, transport, purchase, obtain, or give away to persons over 21 years of age or older, no more than 28.5 grams of cannabis that is not in the form of concentrated cannabis. (Concentrated cannabis is restricted to eight grams.) Similarly, a person may possess, transport, purchase, obtain, use, manufacture, or give away cannabis accessories to persons 21 years of age or older.

However, AUMA preserved and enumerated several restrictions on the manner and places in which cannabis may be consumed or handled.

2. Local Regulations

AUMA does not supersede or limit the authority of a city to adopt and enforce local ordinances regulating commercial cannabis-related activities and cannabis-related businesses. Regulation through local ordinance is allowed for, but is not limited to, local zoning and land use requirements, business license requirements, and requirements related to reducing exposure to secondhand smoke. A city may also completely ban commercial cannabis activity. Furthermore, a licensing authority must not approve a state license if such approval would violate a city’s ordinance or regulation adopted consistent with state law.

87 Health & Saf. Code, § 11362.1, subd. (a)(4).
89 Health & Saf. Code § 11362.2, subd. (b)(2).
90 Health & Saf. Code § 11362.2, subd. (b)(3).
91 Health & Saf. Code, § 11362.1, subd. (a)(1)–(2). Essentially, individuals at least 21 years old are able to “gift” cannabis as long as both parties are at least 21 years old and there is no compensation exchanged.
92 Health & Saf. Code, § 11362.1, subd. (a)(5). Similarly, individuals over 21 are able to “gift” cannabis products as long as both parties are at least 21 years old and there is no compensation exchanged.
93 Health & Saf. Code, § 11362.45.
94 Bus. & Prof. Code, § 26055, subd. (e) under AUMA; MAUCRSA renumbered this provision to Bus. & Prof. Code, § 26055, subd. (d) and expanded the provision.
AUMA distinguishes between the authority to regulate or ban the transportation of commercial cannabis through a jurisdiction and the authority to regulate or ban the delivery of commercial cannabis inside a jurisdiction. The Bureau adopted California Code of Regulations, title 16, section 5416, subdivision (d), allowing delivery statewide; most recently, the litigation challenging this regulation as violative of AUMA was dismissed as not ripe for adjudication because the court found the Bureau’s regulation did not conflict with a city’s right to control or ban delivery.

3. Locational Restrictions

AUMA restricts the location of commercial cannabis businesses. These restrictions are incorporated into MAUCRSA and discussed in more detail below.

4. Authority to Conduct Law Enforcement Activity and Local Enforcement Related to Cannabis.

AUMA does not supersede or limit existing local authority for law enforcement activity, enforcement of local zoning requirements or local ordinances, or enforcement of local license, permit, or other authorization requirements. Also, it does not require a licensing authority to undertake such enforcement activities. Thus, a local jurisdiction should conduct enforcement of its own laws and requirements.

5. Authority to Allow or Restrict Business ActivityRelated to On-Site Cannabis Consumption.

Under AUMA, the Bureau was authorized to issue a state temporary event license to a licensee authorizing onsite cannabis sales at a county fair event, district agricultural association event, or at another venue expressly approved by a local jurisdiction, provided that the activities comply with certain requirements. These events tend to be large-scale gatherings, often with thousands of people in attendance. It is important to note that the Bureau was only authorized to issue a state license for these events if the local jurisdiction authorizes such events. However, it was unclear whether the Bureau could issue a state license if the event was held on state land located within a local jurisdiction. In practice, the Bureau had required local authorization even when the event was held on state land (e.g., California State Fair located in Sacramento).

AUMA authorizes local jurisdictions to allow businesses where the public can smoke, vape, or ingest cannabis or cannabis-related products on premises, if specific conditions are met. Specifically, the business must comply with the following: (1) access to the area where cannabis consumption is allowed must be restricted to persons 21 years of age or older; (2) cannabis consumption must not be visible from any public place or non-age-restricted area; and (3) sale or consumption of alcohol or tobacco is not

99 Bus. & Prof Code, § 26200, subd. (a).
100 Bus. & Prof Code, § 26200, subd. (b).
101 Bus. & Prof Code, § 26200, subd. (e)(f).
102 Bus. & Prof Code, § 26200, subd. (e)(f)(D).
103 Bus. Proc. Code, § 26200, subd. (g).
allowed on the premises. The law also authorizes local jurisdictions to issue temporary licenses to nonprofit entities primarily providing certain products to low-income persons, subject to various conditions.  

**PRACTICE TIP:** There is no state license category for cannabis consumption businesses. Some cities locally license and permit cannabis consumption as an accessory use to a cannabis retail business. Some cities license and permit cannabis consumption as a stand-alone business. Either way, in order for the business to receive a license from the state, in drafting a cannabis licensing ordinance, the city should identify the consumption business category in the context of a state license category (e.g. retail with consumption permitted).

6. Authority to Enforce State Laws and Regulations.

A city attorney has the authority to bring a civil action against a person engaging in commercial cannabis activity without a license required under state law, and each day may be considered a separate violation. The penalties collected under such action may be used to reimburse the city attorney for costs associated with bringing the action with the remainder to be deposited into the state’s general fund.

In the regulation of state-licensed facilities located within a city, a city has the authority to enforce the regulations of the licensing authority if the licensing authority delegates that authority to the city.  

A complete discussion on enforcement is found later in this Guide.

7. Coordination with the State.

A city had a duty to notify the Bureau upon revocation of any local license, permit, or authorization for a licensee to engage in commercial cannabis activity within the city. Within 10 days of notification, the Bureau was required to inform the relevant licensing authority to begin a process to determine whether a license issued to the licensee should be suspended or revoked. This same notification process remains in place under the DCC.

D. Taxation

AUMA imposes state taxes on the commercial cultivation and sale of both medicinal and nonmedicinal cannabis. This state tax is in addition to any tax imposed by a city, county, or city and county. However, because a city may impose a sales tax only with voter approval and because medicinal cannabis, like any medicinal product, is not subject to a sales tax, many cities have imposed fees or taxes on the gross receipts of cannabis businesses.

104 Bus. & Prof. Code, § 26070.5.
105 Bus. & Prof. Code, § 26200, subd. (d).
106 Bus. & Prof. Code, § 26200, subd. (c).
107 Rev. & Tax Code, § 34100 et seq.
Revenues collected from the state retail excise tax and state tax on cultivation, in addition to specified fines on businesses or individuals who violate regulations, are deposited in the California Marijuana Tax Fund.\textsuperscript{109} Funds generated from taxes and fines are used to compensate state agencies for any regulatory costs not covered by license fees.\textsuperscript{110} In addition, a portion of revenues is meant to be allocated to youth programs, environmental clean-up efforts associated with illegal grows, and programs designed to reduce driving under the influence of alcohol, cannabis or other drugs, among other things.\textsuperscript{111}

The following chart describes the current taxes on cannabis.\textsuperscript{112}

\textsuperscript{116} Rev. & Tax Code, § 34011, subd. (f).  
\textsuperscript{117} Rev. & Tax Code, § 6202.  
\textsuperscript{118} Rev. & Tax Code, § 6202.
On June 27, 2017, California adopted SB 94, which includes not only the Medical and Adult-Use Cannabis Regulation and Safety Act (MAUCRSA\textsuperscript{119}), but also modifies a variety of statutes in the Fish & Game Code, Food & Agriculture Code, Health & Safety Code, and Vehicle Code. MAUCRSA repeal MMRSA,\textsuperscript{120} while combining and harmonizing many of its provisions with AUMA.

Prior to MAUCRSA, the applicable statutes used the terms “marijuana” and “medical marijuana.” MAUCRSA renames these terms as cannabis and medicinal cannabis.\textsuperscript{121} Thus, the Bureau of Marijuana Control and the Marijuana Control Appeals Board, each created by AUMA, became the Bureau of Cannabis Control (Bureau) and the Cannabis Control Appeals Board. Similar changes were made throughout various California Codes to make applicable statutes consistently refer to cannabis rather than marijuana.

### A. State Licensing

MAUCRSA eliminates AUMA’s requirement that a licensee be a California resident. MAUCRSA adds another license type (Type 1C) to those delineated by AUMA, and allowed the Bureau to add additional license types,\textsuperscript{122} an authority it has exercised.\textsuperscript{123} The current types of licenses are:

1. Type 1 — Cultivation; Specialty outdoor; Small.
2. Type 1A — Cultivation; Specialty indoor; Small.
3. Type 1B — Cultivation; Specialty mixed-light; Small.
4. Type 1C — Cultivation; Specialty cottage; Small.
5. Type 2 — Cultivation; Outdoor; Small.
6. Type 2A — Cultivation; Indoor; Small.
7. Type 2B — Cultivation; Mixed-light; Small.
8. Type 3 — Cultivation; Outdoor; Medium.
9. Type 3A — Cultivation; Indoor; Medium.
10. Type 3B — Cultivation; Mixed-light; Medium.
11. Type 4 — Cultivation; Nursery.
12. Type 5 — Cultivation; Outdoor; Large.
13. Type 5A — Cultivation; Indoor; Large.
14. Type 5B — Cultivation; Mixed-light; Large.
15. Type 6 — Manufacturer 1.
16. Type 7 — Manufacturer 2.
17. Type 8 — Testing laboratory.
18. Type 10 — Retailer.
19. Type 11 — Distributor.
20. Type 12 — Microbusiness.
21. Type 13 — Distributor (transport only).
22. Type 14 — Event Organizer.

\textsuperscript{119} Bus. & Prof. Code, § 22000 et seq.
\textsuperscript{120} MMRSA, later modified to be the Medical Cannabis Safety and Regulation Act (MCRSA), related solely to medical cannabis. Since repealed by MAUCRSA, MMRSA/MCRSA is not discussed here.
\textsuperscript{121} One reason why SB 94 modified a broad range of statutes was to implement this change in terminology.
\textsuperscript{122} Bus. & Prof. Code, § 26050.
\textsuperscript{123} The Bureau has added Types 13 and 14. (See e.g. Cal. Code Regs., tit. 16, § 5014.)
A state license is valid for one year from the date of issuance and may be renewed annually. Each license, except for testing labs, are designated with an “A”, indicating adult commercial use, or with an “M”, indicating medicinal use. A testing lab license may test both adult commercial and medicinal cannabis; its license is not marked with an A or M.\footnote{Bus. & Prof. Code, § 26050.} There are differences between an A and an M license; an A-licensee may not sell to persons under the age of 21 nor allow persons under the age of 21 on the licensed premises.\footnote{Bus. & Prof. Code, § 26140, subd. (a).} An M-licensee may allow any person age 18 and over on the premises, and may sell to any person age 18 and over, if such person possesses a valid government-issued identification card and either a valid physician’s recommendation or a valid county-issued identification card.\footnote{Bus. & Prof. Code, § 26140, subd. (c).} With a few exceptions, discussed below, a licensee may hold multiple licenses. However, each licensed premises must be separate and distinct.\footnote{Bus. & Prof. Code, § 26053, subd. (c).} No alcohol or tobacco may be sold on the licensed premises.\footnote{Bus. & Prof. Code, § 26054, subd. (a).}

Various restrictions exist on different types of licenses. For example, license types 5, 5A, or 5B cannot be issued until January 1, 2023.\footnote{Bus. & Prof. Code, § 26012.} Furthermore, a holder of license type 5, 5A, or 5B may not also hold license type 8, 11, or 12.\footnote{Bus. & Prof. Code, § 26061, subd. (c).} A type 8 licensee may not hold any other type of license and may not employ anyone who works at another licensed cannabis business, unless it is also a type 8 business.\footnote{Bus. & Prof. Code, § 26061, subd. (d).}

1. **Coordination with the State**

Under MAUCRSA, a city was required to provide to the Bureau the city’s ordinances or regulations relating to commercial cannabis activity, and the name and contact information for the person designated to serve as the contact for the Bureau in regard to cannabis activity within the city. If no contact was provided, the Bureau assumed the contact was the clerk of the legislative body.\footnote{Bus. & Prof. Code, § 26054, subd. (a).} The city should also provide the Bureau with any changes to the contact person or to the city’s ordinances or regulations.\footnote{Bus. & Prof. Code, § 26055, subd. (f)(2).} These obligations on a City remain after the July 2021 consolidation of agencies, and the City is obligated to send its ordinances and regulations to the DCC.

When an application for a cannabis license is received by the State (the Bureau under MAUCRSA and currently the DCC), the state agency is required to notify the city in which the business proposes to operate, unless the applicant provides evidence of compliance with the city’s ordinances.
or regulations. The city has 60 days in which to respond, indicating whether the proposed business complies with the jurisdiction’s ordinances and regulations. No response from the city creates a rebuttable presumption that the applicant complies with the city’s ordinances and regulations.\textsuperscript{135} Even after the 60-day period passes, the city may notify the state agency in writing that the applicant or licensee does not comply with the local ordinances or regulations, and the licensing authority may no longer presume compliance and may begin disciplinary proceedings.\textsuperscript{136} The state agency may not issue a license to a cannabis business if the business would violate local ordinances or regulations.\textsuperscript{137}

In addition, under MAUCRSA, if the city revoked a local license, permit, or authorization for a licensee to operate a commercial cannabis business, the city must notify the Bureau, and within 10 days of the notice, the Bureau notified the CDFA or CDPH, if that agency issued the license. As of July 12, 2021, the DCC will begin a suspension or revocation process within 60 days of being informed by the city.\textsuperscript{138}

Most cannabis-related licenses require local authorization as a pre-condition to obtaining the desired state license. This requirement provides cities with significant power and discretion to determine the cannabis landscape within their borders. Likewise, it requires city attorneys to be well-versed in the relevant and complex cannabis laws and regulations governing each type of license.

\textbf{PRACTICE TIP:} Cities should designate one staff contact person responsible for responding to licensing inquiries from the DCC, and provide that contact information to the DCC. The two-step (local and state) licensing process works best when there is frequent and open communication on licensing matters between state and city.

\textbf{B. Local Control and Regulation}

Cities retain the authority to adopt and enforce ordinances regulating or prohibiting cannabis businesses, including local zoning and land use requirements and business license requirements.\textsuperscript{139} Similarly, local law enforcement retains the authority to enforce local zoning requirements and ordinances.\textsuperscript{140} State standards constitute the minimum requirements as to health and safety, environmental protection, testing, security, food safety, and worker protections; a city may establish additional standards, requirements, and regulations.\textsuperscript{141}

\textbf{1. Locational Restrictions}

Under state law, there are restrictions on the location of cannabis businesses. A cannabis business cannot be within a 600-foot radius of an existing:

\begin{itemize}
  \item School providing instruction in kindergarten or any grades 1 through 12;
\end{itemize}

\textsuperscript{135} Bus. & Prof. Code, § 26200, subd. (g)(2)(D).
\textsuperscript{136} Bus. & Prof. Code, § 26200, subd. (g)(2)(E).
\textsuperscript{137} Bus. & Prof. Code, § 26200, subd. (g)(1).
\textsuperscript{138} Bus. & Prof. Code, § 26200, subd. (d).
\textsuperscript{139} Bus. & Prof. Code, § 26200, subd. (a)(1).
\textsuperscript{140} Bus. & Prof. Code, § 26200, subd. (a)(2).
\textsuperscript{141} Bus. & Prof. Code, § 26201.
Day care center, as defined by Health & Safety Code section 1596.76; or

Youth center, as defined by Health & Safety Code section 11353.1(e)(2).

The 600 feet is measured as a straight line between the property line of the cannabis business and the closest property line of the lot on which the cannabis business will be located, without accounting for any intervening buildings.

However, a city has the discretion to reduce the 600-foot restriction.

C. Advertising

MAUCRSA imposes various restrictions on the advertising of cannabis. For example, a licensee may not advertise on a billboard located on an interstate highway or on a state highway that crosses the California border. A licensee may not advertise or market cannabis or cannabis products within 1000 feet of a day care center, a school providing instruction in kindergarten or any grades 1 through 12, a playground, or a youth center.

D. Transportation and Delivery

Delivery and transport of commercial cannabis remains an issue. A local jurisdiction cannot ban the transport of cannabis on public roads. However, the delivery of cannabis must comply with local law.

IX. JULY 2021 CONSOLIDATION OF CANNABIS PROGRAMS INTO THE DEPARTMENT OF CANNABIS CONTROL

As this Guide was going to the publisher, on July 12, 2021, AB 141 was signed into law, as part of the Budget Act of 2021. Four days later, SB 160 was signed into law, making revisions and additions to AB 141. These bills went into effect immediately and amended numerous sections of the California Health and Safety Code, most importantly establishing the Department of Cannabis Control (DCC) within the Business, Consumer Services and Housing Agency. The powers, duties, functions, responsibilities, regulations, and jurisdiction for commercial cannabis activities previously divided among the Bureau of Cannabis Control, the Department of Food and Agriculture and the...
Department of Public Health were transferred to the newly created DCC.\(^{149}\)

The majority of the changes made by AB 141 and SB 160 involve consolidating the regulations of the three previous licensing agencies into the same title of the California Code of Regulations, making it simpler for businesses, local governments, and the public to understand the law. A new central DCC website was established at [https://cannabis.ca.gov](https://cannabis.ca.gov). There are a few substantive changes due to the passage of this new legislation, but for the most part, these do not affect a city’s local control over commercial cannabis activity within its jurisdiction, as established under AUMA and MAUCRSA. The key substantive changes under AB 141 and SB 160 include:

- The definition of “commercial cannabis activity” has been revised to include acting as a cannabis event organizer for temporary cannabis events.\(^{150}\)

- “Manufacturer” has been removed from the definitions section; however, the Type 6 and Type 7 licensee categories of “Manufacturer 1” and “Manufacturer 2” remain.\(^{151}\)

- The definition of “manufacture” has been revised to include to package or label.\(^{152}\)

- The provision in MAUCRSA that provided a licensing authority could issue a provisional license until January 1, 2022, has been changed. The DCC may issue provisional licenses until June 30, 2022, with new requirements and documentation for applicants for a provisional license that include cultivation. Provisional licenses may be issued until June 30, 2023, to a local equity license applicant that includes cultivation activities, with certain requirements. No provisional licenses shall be renewed after January 1, 2025, and no provisional license is effective after January 1, 2026. The legislature also expressed its intent that no further exemptions from annual licenses be adopted, and any licenses issued after January 1, 2025, shall be issued in compliance with all relevant environmental laws.\(^{153}\)

- MAUCRSA, for purposes of the California Cannabis Equity Act, defines local equity program as a program adopted or operated by a local jurisdiction that focuses on inclusion and support of individuals and communities who were negatively or disproportionately affected by cannabis criminalization. MAUCRSA required the former Bureau of Cannabis Control to administer a grant program to assist local jurisdictions with the development of local equity programs. Under MAUCRSA the bureau was authorized to enter into an agreement with the Governor’s Office of Business and Economic Development (GO-Biz) to administer the program. Under the new legislation, GO-Biz is required to administer the grant program.\(^{154}\)

- The disciplinary procedures of MAUCRSA have been revised to allow the DCC to suspend, prior to a hearing, a license that has been procured by fraud, misrepresentation, deceit, or material misstatement of fact under

Part 3 — Regulating Cannabis in Cities

State cannabis law is designed to balance decriminalization of certain personal cannabis-related conduct with the intent to “[a]llow local governments to reasonably regulate the cultivation of nonmedical marijuana for personal use by adults 21 years and older through zoning and other local laws, and only ban outdoor cultivation as set forth in this Act.” This Part discusses the various aspects of cannabis regulation in cities.

I. MUNICIPAL AUTHORITY TO REGULATE CANNABIS GENERALLY

Municipal authority in the regulation of cannabis is generally derived from the California Constitution’s grant of police powers. For charter cities, such power is coupled with the Constitution’s grant of municipal affairs authority.

A. The Effect of State Law

The California Constitution limits cities’ exercise of police power only to impose local laws that do not conflict with “general” or state laws. A local law conflicts with state law if it either (1) duplicates, (2) contradicts, or (3) enters a field which has been fully occupied by state law, whether expressly or by legislative implication. Local legislation that conflicts with the general laws of the state is said to be “preempted” and is void. However, charter cities are exempt from this restriction in regard to “municipal affairs.”

Currently, state law fully occupies some fields, such as cannabis-related personal conduct, as described below. In many other fields, however, state law expressly permits local control. For example, municipal land use and business license regulations are expressly permitted by MAUCRSA. When enacting any cannabis-related regulations, cities will need to analyze each regulation for state law preemption.

157 Proposition 64, Section 3, subd. (m) (Nov. 9, 2016), available at https://www.oag.ca.gov/system/files/initiatives/pdfs/15-0103%20%28Marijuana%29_1.pdf.
158 Cal. Const. art. XI, § 7 (“A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws.”).
159 Cal. Const. art. XI, § 5 (“It shall be competent in any city charter to provide that the city governed thereunder may make and enforce all ordinances and regulations in respect to municipal affairs, subject only to restrictions and limitations provided in their several charters and in respect to other matters they shall be subject to general laws.”).
160 Cal Const art XI, §7.
B. The Effect of Federal Law

Although California has enacted substantial regulations to legitimize cannabis in recent years, cities should remain cognizant of the fact that it remains illegal under federal law. Despite considerable efforts to change the Controlled Substances Act (CSA), cannabis remains a Schedule I drug. Moreover, the CSA does not recognize a medicinal necessity defense to its cannabis prohibitions. Accordingly, the manufacture, distribution, or possession of cannabis, even for medicinal purposes, is prohibited under federal law. The courts have found that the CSA's cannabis regulations are a valid exercise of Congress’ authority under the Commerce Clause, even as applied to purely local cannabis activities allowed by state law. Courts have also upheld enforcement of the CSA's cannabis regulations against a variety of other legal challenges.

Nevertheless, the CSA also explicitly contemplates that states would adopt their own controlled substance regulations “unless there is a positive conflict between that provision of [the CSA] and that state law so that the two cannot consistently stand together.” Indeed, several courts have held that the CSA does not preempt recent California laws allowing cannabis activity. Similarly, one court has held that the CSA does not preempt a municipal ordinance requiring medicinal cannabis dispensaries to obtain permits. Another case ruled that because medicinal cannabis use remains illegal under federal law, the Americans with Disabilities Act of 1990 does not protect against discrimination on the basis of medicinal cannabis use, even if that use is in accordance with state law explicitly authorizing such use.

II. REGULATION OF CANNABIS-RELATED PERSONAL CONDUCT

As discussed in more detail earlier in this Guide, the majority of AUMA was incorporated into MAUCRSA; however, the operative sections of AUMA governing personal cannabis use remained unchanged.

A. Personal Conduct Authorized

1. Medicinal Cannabis

Even though AUMA and MAUCRSA were enacted later, the CUA is still the touchstone on medicinal-cannabis-related personal conduct. The CUA provides that certain state criminal laws relating to

164 Given the status of cannabis under federal law, there is an unresolved question of the effect of California Government Code section 37100, which allows cities to pass local laws that are “not in conflict” with state or federal law.
165 Gonzales v. Raich (2005) 545 U.S. 1, 15. See Americans for Safe Access v. Drug Enforcement Admin. (D.C. Cir. 2013) 706 F.3d 438, 453 (denial of petition to review the DEA's decision to maintain cannabis as a Schedule I drug.).
166 United States v. Oakland Cannabis Buyers' Co-op. (2001) 532 U.S. 483, 491; but see Raich v. Gonzales (9th Cir. 2007) 500 F.3d 850, 858-860.
167 Gonzales v Raich, supra, 545 U.S. at p. 29.
171 It should be noted that as of the publication of this Guide, the term “storefront retail” is a more modern term for what used to be known as “dispensary.”
173 James v. City of Costa Mesa (9th Cir. 2012) 700 F.3d 394.
the possession and cultivation of cannabis “shall not apply to a patient, or to a patient’s primary caregiver, who possesses or cultivates cannabis for the personal medicinal purposes of the patient upon the written or oral recommendation or approval of a physician.” This allows a qualified patient (or their primary caregiver) to possess and cultivate any amount of cannabis reasonably necessary for their current medical condition. For additional details on the scope of the CUA, see Part I of this Guide.

However, it does not preempt local ordinances regulating or banning the cultivation of medicinal cannabis. And it does not preempt local ordinances that completely and permanently banned medicinal cannabis dispensaries that were later allowed under the Medical Marijuana Program Act.

2. Non-Medicinal Cannabis

In 2016, AUMA made it expressly legal for those age 21 and older to:

- Possess, process, transport, purchase, obtain, or give away to persons 21 years of age or older without any compensation whatsoever, not more than 28.5 grams of cannabis, or not more than 8 grams of concentrated cannabis, including as contained in cannabis products;
- Possess, plant, cultivate, harvest, dry, or process up to six living cannabis plants and possess the cannabis produced by the plants; and
- Smoke or ingest cannabis or cannabis products.

However, personal use and consumption is not unfettered. For example, cannabis in excess of 28.5 grams that is produced by plants kept pursuant to the personal cultivation provision of the Act must be kept in a locked space on the grounds of a private residence that is not visible from a public place. In addition, state law prohibits the following:

- Smoking or ingesting cannabis or cannabis products in public, except as authorized locally (for example in cannabis consumption lounges);
- Smoking cannabis or cannabis products where smoking tobacco is prohibited;
- Smoking cannabis or cannabis products within 1,000 feet of a school, day care center, or youth center while children are present, with certain exceptions;
- Possessing an open container of cannabis or cannabis products while driving, operating, or riding in a motor vehicle, boat, vessel, aircraft, or other vehicle used for transportation;
- Possessing, smoking, or ingesting cannabis or cannabis products on the grounds of a school.

---

174 Health & Saf. Code, § 11362.5, subd. (d).
177 City of Riverside v. Inland Empire Patients Health and Wellness Center, Inc. (2013) 56 Cal.4th 729.
178 This equates to just under an ounce.
179 Health & Saf. Code, § 11362.1, subd. (a).
180 Health & Saf. Code, § 11362.1, subd. (a)(2).
day care center, or youth center while children are present; and

- Smoking or ingesting cannabis or cannabis products while driving or riding in a motor vehicle, boat, vessel, aircraft, or other vehicle used for transportation, with certain exceptions.\(^\text{181}\)

With the notable exception of cannabis cultivation, as discussed below, cities cannot regulate the personal cannabis-related conduct that is expressly authorized by AUMA.\(^\text{182}\) However, AUMA expressly provides that cities may regulate or prohibit any cannabis-related personal conduct within a government owned, leased, or occupied building.\(^\text{183}\) Additionally, AUMA maintained the rights and obligations of cities, as public employers, to maintain drug-free workplaces, to prohibit cannabis activity in the workplace, and to implement policies prohibiting cannabis use by employees and prospective employees.\(^\text{184}\)

### B. Cannabis Cultivation for Personal Use

Cities have flexibility to regulate cannabis cultivation for personal use. Cities may reasonably regulate, but not ban, indoor cannabis cultivation in a private residence for personal use. Cities may regulate or ban outdoor cannabis cultivation for personal use on the grounds of a private residence.\(^\text{185}\) Personal use cannabis cultivation in a fully enclosed, secure, accessory structure on the grounds of a private residence may be reasonably regulated, but not banned.\(^\text{186}\) AUMA defines “private residence” as “a house, an apartment unit, a mobile home, or other similar dwelling.”\(^\text{187}\)

State law limits personal cannabis cultivation to six plants, and requires that the plants and any cannabis produced by the plants, exceeding the allowable 28.5 grams, be stored in a locked space not visible from a public place.\(^\text{188}\) Only six plants may be cultivated in or on the grounds of a private residence at one time.\(^\text{189}\)

Within these parameters, cities may consider additional, reasonable regulations of cannabis cultivation for personal use. No appellate court has yet opined on the permissible scope of “reasonable regulations.” To date, only one trial court has ruled on a challenge to municipal regulation of personal cannabis cultivation.\(^\text{190}\) The court found that the local regulations outlining permit eligibility requirements were “arbitrary and capricious” because they excluded “certain persons from doing what state law specifically allows them to do,” i.e. cultivate six cannabis plants within a single residence.\(^\text{191}\) Additionally, the court found the local regulations on permitting, use of residential space, and inspections were unreasonable because they did not have a nexus to the activity being regulated, personal cultivation of six cannabis plants.\(^\text{192}\) Until appellate judicial guidance is provided, cities may

190 Harris v. City of Fontana (Super. Ct. San Bernardino County, 2018, No. CIVDS 1710586).
191 Id. at p. 7.
192 Id. at pp. 7-9.
consider adopting reasonable, rationally-related public health, safety, and welfare regulations furthering their Constitutional police powers and the authority given by the voters in AUMA.\(^\text{193}\)

**PRACTICE TIP:** In crafting reasonable regulations on personal cannabis cultivation, cities should consider the breadth and scope of desired regulations, being careful to establish the rational connection to regulating personal cultivation of small amounts of cannabis plants. Regulations may require coordination with multiple city departments regarding permitting, permissible locations for personal cultivation, compliance with safety codes and standards, accessory structure requirements, environmental standards, as well as safety and nuisance standards, and outdoor inspections. Regulatory needs will vary according to the environment and the will of each city. Cities should be mindful of the types of regulations found to be unreasonable in Harris v. City of Fontana when determining how best to approach this type of regulation.

Until the permissible scope of reasonable local regulation is delimited by a published court opinion, restrained regulations that do not conflict with the broad permission granted to individuals by AUMA are likely to be upheld. Aggressive local regulations, such as those limiting who can obtain a permit or requiring payment of any delinquent, preexisting administrative citation fines, may be at a greater risk of being struck down.

**PRACTICE TIP:** Given the lack of court guidance on this issue, a severability clause should be included in any local regulatory ordinance imposing regulations of cannabis cultivation for personal use.

### III. Regulation of Commercial Cannabis Activity

Cities may prohibit or regulate commercial cannabis activity within their jurisdictions.\(^\text{194}\) The scope and type of regulation may vary depending on the nature and character of the city and the will of its residents. A city may allow and regulate all types of cannabis businesses, only certain types of cannabis businesses, or may ban any or all commercial cannabis activity. Local regulations may be stricter than the minimum state standards.\(^\text{195}\) One of the main tenets of AUMA was local control—cities that want to permit commercial cannabis activity may

\(^\text{194}\) Bus. & Prof. Code, §§ 26200, 26201. See also Proposition 64, Section 3, subds. (c), (d) (Nov. 9, 2016), available at: https://www.oag.ca.gov/system/files/initiatives/pdfs/15-0103%20%28Marijuana%29_1.pdf.

\(^\text{195}\) Bus. & Prof. Code, § 26201.
do so on their own terms and cities that want to prohibit these uses are free to do so as well.

Commercial cannabis activity is also regulated extensively by state law, which includes a detailed licensing scheme. Generally, proof of local authorization is required before an applicant may be issued a state license for commercial cannabis activity.\(^{196}\) Cities are required to provide copies of commercial cannabis ordinances to the state, along with a contact person who can verify local compliance by an applicant.\(^{197}\) The local jurisdiction must provide a response to an inquiry by the state licensing agency (now consolidated under the Department of Cannabis Control) within 60 business days, or the licensing authority will make a rebuttable presumption that the application complies with local regulations.\(^{198}\)

### A. Land Use Considerations

Prior to the adoption of AUMA and MAUCRSA, many cities used planning and zoning regulations to prohibit or regulate cannabis activity. The California Supreme Court ruled unanimously in *City of Riverside v. Inland Empire Patients Health & Wellness Center, Inc.*\(^{199}\) that the CUA and MMPA do not preempt local ordinances that completely and permanently ban medicinal cannabis facilities.\(^{200}\) In reaching this conclusion, the court recognized that the local police power, which derives from California Constitution, article XI, § 7, “includes broad authority to determine, for purposes of public health, safety, and welfare, the appropriate uses of land within a local jurisdiction’s borders, and preemption by state law is not lightly presumed.”\(^{201}\) The court concluded that the CUA and MMPA neither expressly nor impliedly preempt local zoning authority.\(^{202}\) Instead, the CUA and MMPA both have a very limited and specific reach.\(^{203}\) *Inland Empire* reasoned that the MMPA immunizes only “the cooperative or collective cultivation and distribution of medical marijuana by and to qualified patients and their designated caregivers from prohibitions that would otherwise apply under state law” but does “not thereby *mandate* that local governments authorize, allow, or accommodate the existence of such facilities.”\(^{204}\)

Subsequently, the court in *Maral v. City of Live Oak*\(^{205}\) held that neither the CUA nor MMPA preempts a city’s police power to prohibit medicinal cannabis cultivation. In so holding, the *Maral* court relied heavily on the reasoning and analysis of the Supreme Court’s decision in *Inland Empire*. *Maral* confirmed that there is “no right—and certainly no constitutional right—to cultivate medical marijuana.”\(^{206}\) The *Maral* plaintiffs made several other arguments against a cultivation ban, including claims of violation of equal protection of disabled persons, procedural and Ralph M. Brown Act \(^{207}\) “irregularities” in the adoption of

\(^{207}\) Gov. Code, § 54950 et seq.
the ordinance, and “negative impact” to “long-cherished property rights.” The court rejected all of these claims as “undeveloped” arguments, which the court felt it did not need to address.208

In Kirby v. County of Fresno209 the court upheld the part of a county ordinance banning medicinal cannabis dispensaries and banning the personal cultivation or storage of medicinal cannabis within the county. The court also upheld a component of the ordinance that limited the use of medicinal cannabis to qualified patients at their personal residences only. In reaching these holdings, the court relied on Inland Empire and Maral, and it also conducted an independent analysis of the text of the CUA and MMPA. The court found there is no right to cultivate medicinal cannabis and that municipalities may enact land use regulations restricting or banning cultivation. The court further concluded that a patient does not have a right to obtain or use medicinal cannabis but that the CUA and MMPA provide a defense to possession or use when a person is faced with arrest or criminal prosecution. However, the court struck down the criminal penalty portions of the county ordinance, finding that the component of the ordinance making its violations a misdemeanor was preempted by California’s extensive statutory scheme relating to cannabis.

Together, Inland Empire, Maral, and Kirby supported a municipality’s authority to regulate or to ban both medicinal cannabis dispensaries and medicinal cannabis cultivation pre-AUMA (a concept that is continued in AUMA and MAUCRSA). These principles do not abrogate the medicinal cannabis defense in a prosecution under state criminal law, however, as local land use authority cannot nullify a statutory defense to violations of state law.210

In addition to Inland Empire, Maral, and Kirby, the following opinions have upheld local zoning bans or restrictions on medicinal cannabis establishments:

- **County of Los Angeles v. Hill**211 rejected a claim that the CUA and MMPA preempted a conditional use permit requirement and locational restrictions for medicinal cannabis dispensaries;

- **Browne v. County of Tehama**212 upheld a rural county ordinance regulating cannabis cultivation;

- **County of Tulare v. Nunes**213 upheld a zoning ordinance that restricted the location of medicinal cannabis collectives and cooperatives; ruling that limitations on the quantity of cultivation do not render an ordinance unconstitutional in a context other than criminal prosecution;

- **Conejo Wellness Ctr., Inc. v. City of Agoura Hills**214 held that neither the CUA nor the MMPA preempted a local ban on medicinal cannabis dispensaries; and

- **City of Monterey v. Carrshimba**215 affirmed summary judgment against a medicinal cannabis dispensary and held that a dispensary

---

208 Moral, supra, 221 Cal.App.4th at p. 984.
was not a listed use in the city’s planning ordinance and thus was presumptively banned; the court rejected the claim that a dispensary fell within preexisting land use classifications for personal services, retail sales, and pharmacies and medical supplies.

In addition, many medicinal cannabis advocates have unsuccessfully challenged local bans, regulations, and permitting schemes on equal protection, due process, and other constitutional grounds.\(^{216}\)

In *Safe Life Caregivers v. City of Los Angeles*,\(^ {217}\) the court found that an initiative measure banning medicinal cannabis businesses did not have to comply with either (1) the state’s minimal procedural requirements for zoning ordinances in Government Code section 65804 (which requires compliance with the public hearing requirements of Government Code section 65854) or (2) the city’s charter requirements for passage of an ordinance (because it was passed by the electorate and not by the city council). The measure also provided explicit immunity from prosecution of nuisance violations for medicinal cannabis businesses that fell within certain limited categories and complied with a set of regulations. The court held that the measure did not unlawfully grant, in violation of substantive and procedural requirements, a variance or a conditional use permit, nor did the initiative grant any type of land use right; it merely provided limited immunity under certain conditions. Finally, the court reviewed the MMRSA and held that it did not preempt local regulation.\(^ {218}\)

**NOTE:** It is important to remember that all of the foregoing cases arose prior to the adoption of AUMA and MAUCRSA, and accordingly, some of the holdings may be affected. Under MAUCRSA, cities may no longer prohibit indoor personal cultivation, although it may impose reasonable restrictions. See Part 3, Section II of this Guide regarding Regulation of Cannabis-Related Personal Conduct. Nevertheless, these cases illustrate the evolution of local land use and regulatory authority for cannabis uses in California, which ultimately became a critical element of AUMA. These cases also discuss many relevant topics that are helpful to practitioners, including local police power, preemption, zoning ordinance adoption, disabled access, conflicts of law, torts, as well as many

---

\(^{216}\) Maral, *supra*, 221 Cal.App.4th at p. 984 (rejecting various constitutional challenges to city’s cultivation ban); *County of Tulare v. Nunes, supra*, 215 Cal. App.4th at p. 1204 (county’s public safety concerns constituted rational basis for differential treatment of medical cannabis dispensaries); *Conejo Wellness Ctr., Inc. supra*, 214 Cal.App.4th at p. 1560 (rejecting substantive due process, procedural due process, and right to privacy challenges to dispensary ban); *420 Caregivers, LLC v. City of Los Angeles* (2012) 219 Cal.App.4th 1316 (rejecting due process and right to privacy challenges to ordinance restricting medical cannabis dispensaries); and *County of Los Angeles v. Hill* 192 Cal.App.4th at 874 (zoning requirements for medical cannabis dispensaries did not violate Equal Protection Clause because dispensaries created unique public safety concerns and were not similarly situated to pharmacies). See also *The Kind & Compassionate v. City of Long Beach* (2016) 2 Cal.App.5th 116 (ban on dispensaries did not violate state or federal laws protecting disabled persons, did not constitute civil rights violation under 42 USC §1983, and did not violate various state tort laws).

Part 3 — Regulating Cannabis in Cities

cannabis-specific topics. Accordingly, this body of case law remains relevant and helpful, even after adoption of AUMA.

With the adoption of both AUMA and MAUCRSA, cities’ ability to adopt land use ordinances and other business license ordinances to regulate both medicinal and adult-use cannabis uses was reaffirmed. In City of Vallejo v. NCORP4, the court recognized that both prior state law and AUMA do not preempt cities ability to allow, restrict, limit, or prohibit commercial cannabis land uses, and upheld the city’s ordinance limiting allowed medicinal cannabis dispensaries to those that previously paid local business taxes. Notwithstanding the foregoing, practitioners should familiarize themselves with the following sections from MAUCRSA that affect local regulation of cannabis uses:

- **Delivery:** Cities can ban or regulate deliveries within their borders. However, cities cannot prevent a delivery service from using public roads to pass through its jurisdiction.

B. Local Ordinances

1. Distinguishing Between Business and Land Use Regulation

Whether cities should adopt a land use ordinance or a business license ordinance, or both, to regulate cannabis uses and activities depends upon the goals the city is trying to achieve. If a city’s goal is to address land use impacts associated with cannabis uses, such as limiting the location or odor, then the city will need to follow both state and local law for adopting ordinances that regulate the land use impacts of cannabis activities. For example, local operating regulations may encompass industry-specific standards, public safety risks, quality of life concerns, and other factors unique to the locale. If a city’s goal is to address the concerns of the business aspect of cannabis activities, such as who may engage in commercial cannabis activities, then the city may regulate the cannabis activity through its general police powers. For example, cities may consider permit or business license requirements, including objective standards for applications, approvals, denials, renewals, and licensing revocations, as well terms of security, odor, inspections, notices of violations, levels of penalties, and an appeals process.

- **Personal cannabis cultivation:** Cities may reasonably regulate but may not prohibit personal cultivation. See Local Regulation of Cannabis Cultivation for Personal Use above.

- **Cannabis consumption lounges:** In addition to any local regulations, cannabis consumption lounges must meet certain state criteria related to access and ensuring consumption is not visible from public areas.

- **Buffer Zone:** Cannabis dispensaries may not be located within 600 feet of schools, youth centers, and day care centers, unless a city has adopted a local ordinance providing otherwise.

---

219 Bus. & Prof. Code, § 26200, subd. (a)-(b).
221 Bus. & Prof. Code, § 26200, subd. (g).
223 Bus. & Prof. Code, § 26090.
224 Bus. & Prof. Code, § 26090, subd. (e).
**PRACTICE TIP:** A city that incorporates most regulatory provisions in the business regulations should still identify in its zoning ordinance the zones where the various commercial cannabis uses are permitted.

**PRACTICE TIP:** Many cities historically regulated cannabis operations through conditional use permits authorized under the zoning ordinance. The conditional use permit gave cities the ability to impose conditions on the use to prevent any secondary impacts. Remember that a conditional use permit runs with the land and is not tied to a particular operator. A regulatory business license tied to the operator should be required in cities that want to maintain control of who operates a commercial cannabis business.

2. **California Environmental Quality Act (CEQA)**

In adopting an ordinance that regulates or prohibits cannabis uses, cities should consider the application of the California Environmental Quality Act (CEQA). Depending upon the circumstances, the adoption of these types of ordinances may be supported by a finding that the ordinance is either not a “project” under CEQA or exempt from CEQA. Otherwise, an environmental document may be required.

Cannabis regulations are not a “project” subject to CEQA if they “will not result in a direct or reasonably foreseeable indirect physical change in the environment” or if they will not have “the potential for causing a significant effect on the environment.” However, in *Union of Med. Marijuana Patients, Inc. v. City of San Diego,* the California Supreme Court held that an ordinance amending zoning regulations to allow up to four medicinal cannabis dispensaries in each council district at specific locations with a conditional use permit qualifies as a “project” under CEQA.

The Court found that the regulations could, potentially, result in indirect physical changes in the environment by permitting the establishment of a sizeable number of a new type of business that could foreseeably result in new retail construction to accommodate the businesses and by changing patterns of vehicle traffic.

MAUCRSA had provided a statutory exemption for “the adoption of an ordinance, rule, or regulation by a local jurisdiction that requires discretionary review and approval of permits, licenses, or other authorizations to engage in commercial cannabis activity.” However, that exemption expired by operation of law on June 30, 2021.

If an ordinance is subject to CEQA, and not exempt, an environmental document may be required. The scope of the environmental review will depend on the type of activity the city is authorizing under the ordinance. By way of example, cultivation activities can require analysis into water use, pesticide use,

229 Cf. *Union of Med. Marijuana Patients v City of Upland* (2016) 245 Cal.App.4th 1265 [ordinance banning mobile dispensaries, adopted in 2013, is not a “project” under CEQA partly because of speculative nature of plaintiffs’ claims of environmental consequences].
230 Bus. and Prof. Code § 26055(h).
231 Bus. and Prof. Code § 26055(h).
drainage, and other environmental considerations. Retail operations, on the other hand, may be more similar to all other permitted retail operations in the city’s commercial zones and may not generate any unusual impacts to the environment.

3. Social Equity Issues

In adopting local ordinances, cities may also want to consider social equity concerns. The California Legislature has found that cannabis prohibition has had a “devastating impact on communities across California,” with individuals who have cannabis convictions encountering greater difficulties in accessing capital, business space, technical support, and regulatory compliance assistance. Furthermore, these impacts from cannabis convictions have had a disproportionate impact on Black and Latinx people, even though people of all races used or sold cannabis at the same rates during the cannabis prohibition. The California Cannabis Equity Act of 2018 is intended to ameliorate these adverse impacts by providing assistance to those individuals and communities that have been negatively impacted. The Act was amended in July 2021 when the three state licensing agencies were consolidated under the DCC. Under the Act, the DCC may provide technical assistance for local equity programs, which includes providing grant funding to eligible local jurisdictions upon appropriation of funds by the Legislature, through the Governor’s Office of Business and Economic Development (GO-Biz).

Any local jurisdiction that allows for commercial cannabis activity may implement a local equity program. A “local equity program” is defined as “a program adopted by a local jurisdiction that focuses on inclusion and support of individuals and communities in California’s cannabis industry who are linked to populations or neighborhoods that were negatively or disproportionately impacted by cannabis criminalization as evidenced by the local jurisdiction’s equity assessment.” An “equity assessment” may include a review of rates related to local cannabis arrests and convictions, consideration of how the local jurisdiction’s cannabis policies have impacted communities and populations within its jurisdiction, and other information of how the War on Drugs has impacted communities within its jurisdictions. First the Bureau, and now the DCC, publishes a list of local jurisdictions that have adopted local equity programs and a list of model local equity ordinances developed by advocacy groups and experts. Although the California Cannabis Equity Act of 2018 provides that the state may assist local jurisdictions with the implementation of local equity programs, a local jurisdiction allowing for cannabis-related use and activities is not required to implement a local equity program.

237 Bus. & Prof. Code, § 26240, subd. (b).
238 Bus. & Prof. Code, § 26246, subd. (b). The list is available at https://cannabis.ca.gov/local-equity-information/.
C. Commercial Cannabis Cultivation

Commercial cannabis cultivation is regulated statewide through Chapter 6 of Division 10 of the Business and Professions Code, and through regulations originally promulgated by the California Department of Food and Agriculture (CDFA), in California Code of Regulations, Title 3, Division 8, Chapter 1. Cultivation is defined as “any activity involving the planting, growing, harvesting, drying, curing, grading, or trimming of cannabis.”

Cultivation may occur in a variety of ways, including indoor, outdoor, mixed light, nursery, and special cottage cultivation operations, each subject to specific state licensing and regulatory requirements. The type of commercial cultivation license required generally depends on the square footage of the canopy size and the type of light and disproportionately impacted by the criminalization of cannabis activities. Cities can also consider creating a more even playing field in the selection process by allowing potential operators to participate in a selection process before having secured a physical location for the business. For many, the cost of securing and leasing a business location and holding that location for many months during a long selection process can be too expensive. This leaves only well-capitalized and well-established businesses able to compete for the licenses, which can in turn perpetuate the historical social inequities that AUMA aimed to reverse.

Social equity can come in many forms and can be incorporated into many aspects of a business selection process.

PRACTICE TIP: Equity programs can be quite varied. In jurisdictions that have merit-based or competitive business selection processes, some cities have given more weight to, or otherwise favored, applicants in communities that have been historically

PRACTICE TIP: It is important to remember that local equity programs are intended to mitigate the adverse impacts caused by a city’s cannabis-related policies. For example, a city that prohibited all cannabis-related use and activities until AUMA was passed will have different social equity considerations compared to a city that allowed for uses and activities related to medicinal cannabis following the adoption of Proposition 215. Practitioners should be mindful of their own city’s historic practices when researching and borrowing from other cities’ social equity programs.
used in cultivation.\textsuperscript{242} State law prohibits large cultivation site licenses until January 1, 2023.\textsuperscript{243} Large sites include those greater than one acre for outdoor sites with no artificial light, indoor sites using exclusively artificial light greater than 22,000 square feet, and mixed light sites greater than 22,000 square feet.\textsuperscript{244}

Commercial cultivators are subject to strict, statewide, water supply and irrigation requirements,\textsuperscript{245} as well as restrictions on marketing cannabis as organic and properly designating the county of origin.\textsuperscript{246} State license applicants must submit a diagram of the property proposed for cultivation, a detailed cultivation plan, a pest management and pesticide plan, and a cannabis waste plan.\textsuperscript{247} Additionally, state-licensed cannabis cultivators must comply with weighing, packaging, labeling, and track and trace regulations.\textsuperscript{248}

CITIES HAVE BROAD DISCRETIONARY AUTHORITY IN THE REGULATION OF COMMERCIAL CANNABIS CULTIVATION. ACCORDINGLY, CITIES MAY REGULATE LOCAL LICENSING, TRADITIONAL PUBLIC SAFETY MEASURES, ENVIRONMENTAL MEASURES, AND ZONING AND LAND USE AND DEVELOPMENT STANDARD REGULATIONS (LIGHTING, HOURS OF OPERATION, NOISE, ODOR, ETC.). SOME AREAS OF PARTICULAR REGULATION ARE IDENTIFIED IN STATE LAW, INCLUDING LAND CONVERSION, BUILDING AND FIRE STANDARDS, GRADING, ELECTRICITY, WATER USAGE AND QUALITY, HABITAT PROTECTION, AND OTHER ENVIRONMENTAL CONCERNS.\textsuperscript{249} CITIES MAY ENACT FURTHER REGULATIONS TO AMELIORATE ODORS, EXCESSIVE NOISE, UNSANITARY CONDITIONS, PESTICIDE EXPOSURE, SECURITY CONCERNS, INCLUDING BACKGROUND CHECKS, AND LOCAL ENVIRONMENTAL IMPACTS.

D. Commercial Cannabis Manufacturing

Commercial cannabis manufacturing is regulated in state law by Chapter 13 of Division 10 of the Business and Professions Code, and by California Code of Regulations, Title 17, Division 1, Chapter 13. Cannabis manufacturers create “cannabis products,” defined as “cannabis that has undergone a process whereby the plant material has been transformed into a concentrate, including, but not limited to, concentrated cannabis, or an edible or topical product containing cannabis or concentrated cannabis and other ingredients.”\textsuperscript{250}

Cannabis manufacturers must obtain a state license, the type of which depends, in part, on whether the manufacturer uses volatile solvents, non-volatile solvents, or no solvents.\textsuperscript{251} Manufacturers are subject to detailed state regulatory requirements, including:\textsuperscript{252}

\begin{itemize}
  \item Security regulations
\end{itemize}

\begin{thebibliography}{9}
\bibitem{242} Bus. & Prof. Code, § 26061; Cal. Code Regs., tit. 3, §§ 8200, 8201.
\bibitem{243} Bus. & Prof. Code, § 26061, subd. (c).
\bibitem{244} Bus. & Prof. Code, § 26061, subd. (c). But note, CDFA by implication, allows a licensee to hold multiple licenses for small operations for a single site but only one medium license for a single site. For example, a licensee wishing to cultivate 82,000 square feet indoors may hold nine Type 2A licenses. (See Cal. Code Regs., tit. 3, § 8209.) The California Growers Association filed suit in 2018 to challenge this regulation but dropped the lawsuit in 2019. https://mjbizdaily.com/wp-content/uploads/2019/01/CGA-suit-over-license-stacking-dismissed.pdf.

\end{thebibliography}
Part 3 — Regulating Cannabis in Cities

- Extraction regulations
- Product quality control regulations
- Grounds, building, and premises regulations designed to ensure quality control and safety
- Equipment regulations
- Personnel procedures promoting cleanliness
- Raw material safety regulations
- Manufacturing protocols
- Record keeping
- Labeling and packaging regulations
- Inspection requirements

Like other commercial cannabis businesses, cannabis manufacturers must comply with all local ordinances and regulations in order to obtain a state license. In addition to land use and zoning requirements, cities may enact health, safety, and welfare regulations for local cannabis manufacturers. Such regulations may include, for example, (1) land use and zoning regulation imposition of development standards; (2) business permits or licenses; (3) regulatory inspections; (4) a limit on the number of permitted manufacturing businesses; (5) restricted hours of operation; (6) proof of landlord authorization; (7) notice to surrounding property owners; (8) insurance and indemnity; (9) facility and equipment requirements; (10) safety requirements; (11) specific requirements on the use of compressed gases and other manufacturing techniques; (12) building and perimeter security requirements; (13) background checks that go above and beyond that required under state law; and (14) signage requirements or restrictions. Cities may also consider different requirements for manufacturers operating under different types of state licenses, calculated to apply the most stringent regulations to those manufacturing operations posing the greatest public safety risk.

There are several different manufacturing license types. For example, Type N is for manufacturers that produce cannabis products, other than extracts or concentrates that are produced through extraction. As an example, a Type N license can be for a manufacturer who merely uses an already-produced extract and infuses the extract into a food or beverage.

---

253 Notably, no volatile solvent cannabis extraction or closed loop extraction may occur in an area zoned as residential. (Cal. Code Regs., tit. 17, §§ 40222, subd. (c), 40225, subd. (g).)
254 Bus. & Prof. Code, § 26055.
255 Bus. & Prof. Code, §§ 26200, 26201; Proposition 64, Section 3, subd. (c), (d) (Nov. 9, 2016), available at: https://www.oag.ca.gov/system/files/initiatives/pdfs/15-0103%20%20%20%20Marijuana%29_1.pdf.
PRACTICE TIP: “Manufacturing” with a Type N Manufacturing license is somewhat of a misnomer and can be confusing to city staff or city councilmembers. Technically, merely mixing an extract into a food or beverage is considered “manufacturing.” Therefore, it may be important for cities to distinguish between manufacturers who are merely infusing products (taking a cannabis extract and mixing in brownie mix, for example), and those who are using a more comprehensive manufacturing operation to extract the THC from other cannabinoids. Due to the fact that infusion may have fewer impacts on surrounding areas, cities can consider allowing infusion in more populated zones, like general commercial districts, and extraction in less populated zones, like industrial districts.

E. Commercial Cannabis Testing

Commercial cannabis and cannabis products are subject to state-imposed testing requirements, and shall not be sold commercially without being tested by a licensed laboratory. A person that holds a state testing laboratory license is prohibited from obtaining a license for any other commercial cannabis activity, and is prohibited from employing anyone who is also employed by another licensee that does not hold a state testing laboratory license.

All cannabis testing laboratories must be certified to test for a variety of substances in cannabis and cannabis products, and must follow accepted laboratory testing guidelines. Testing laboratories must provide a certificate of analysis for each representative cannabis sample analyzed, and are responsible for quality assurance, proficiency testing, and audits.

In addition to traditional land use and zoning requirements, cities may consider the following when regulating cannabis testing laboratories: business permits, regulatory inspections, notice to surrounding property owners, landlord authorization, insurance and indemnity, proof of all laboratory certifications and accreditations, building and perimeter security requirements, operating procedures and security requirements for delivery of cannabis and cannabis products for testing, restricted hours of operation or restricted hours for accepting cannabis deliveries for testing, background checks, and signage requirements or restrictions.

PRACTICE TIP: Cities may want to consider allowing testing facilities in various zones within their city, as secondary effects may be minimal. The use functions much like any other medicinal testing facility or laboratory.

F. Commercial Cannabis Distribution

Distribution plays a vital role in the commercial cannabis system. Distribution is defined as the...
“procurement, sale, and transport of cannabis and cannabis products between licensees.”\textsuperscript{264}

A distributor can hold a Type 1\textsuperscript{265} or Type 13 license.\textsuperscript{266} A Type 11 license allows a distributor to transport cannabis between licensed cannabis premises; to package, re-package, label, and re-label cannabis for retail sale; transport a cannabis goods batch to a testing lab while also ensuring the proper retrieval and documentation of batch samples;\textsuperscript{267} transfer untested cannabis goods, or untested immature cannabis plants or seeds to specified licenses; and to store certain packaged cannabis goods.\textsuperscript{268} A Type 13 license allows a distributor to engage in transport only.\textsuperscript{269} In addition, a microbusiness (Type 12 license) can act as a distributor for self-distribution of its own commercial cannabis products.\textsuperscript{270}

All distributors must comply with minimum security and transportation safety requirements for the commercial distribution of cannabis and cannabis products, which relate to the following:

\begin{itemize}
\item Comprehensive general liability insurance;
\item Restrictions on who may be a driver or passenger in the transport vehicle;
\item Restrictions on the vehicle itself — each vehicle must have a valid motor carrier permit pursuant to Vehicle Code section 34620;
\item Inventory accounting;
\item Records of tax payments, testing, etc.; and
\item Shipping manifest.\textsuperscript{271}
\end{itemize}

In addition to state law, a distributor must also comply with any local ordinances.\textsuperscript{272} However, a city cannot prevent the transportation of cannabis or cannabis products on public roads by a licensee acting in compliance with Division 10 of the Business and Professions Code.\textsuperscript{273} Therefore, a city cannot prevent a distributor’s transport vehicle from traveling through its jurisdiction on public roads simply because the distributor is transporting cannabis products, but can regulate or ban distribution facilities within its boundaries.\textsuperscript{274} Some types of regulations that a city may adopt include zoning regulations to ensure that the distribution facilities are located in a commercial/industrial center, as well as health and safety regulations relating to security, vehicle, and storage requirements.

\section*{G. Commercial Cannabis Retail}

Commercial cannabis retail operations are regulated statewide through Chapter 7 of Division 10 of the Business and Professions Code, and through regulations in the California Code of Regulations, Title 16, Division 42.

\begin{footnotes}
\item[264] Bus. & Prof. Code, § 26001, subd. (f).
\item[265] Bus. & Prof. Code, §§ 26050, subd. (a)(19)
\item[266] Cal. Code Regs. tit. 16, § 5315.
\item[267] If the batch passes, the distributor may transport the cannabis good to a licensed retailed or a licensed distributor. However, if the batch fails and cannot be remediated, the distributor must destroy the batch. (Cal. Code Regs. tit. 16, §5306(e).)
\item[269] Cal. Code Regs. tit. 16, § 5315.
\item[270] Bus. & Prof. Code, § 26070, subd. (a)(3)(A).
\item[272] Bus. & Prof. Code, § 26055.
\item[273] Bus. & Prof. Code, § 26080, subd. (b).
\item[274] Bus. & Prof. Code, § 26055.
\end{footnotes}
A commercial cannabis business that engages in the retail sale and delivery of cannabis or cannabis products to customers must obtain a state “Retailer” license, which is a Type 10 license.\textsuperscript{275}

The term retailer includes both medicinal retailers as well as adult-use retailers. A license may be an A-designation (for adult-use) or an M-designation (for medicinal). Dispensaries that previously operated under the collective or cooperative model for medicinal cannabis have been phased out under the regulatory scheme promulgated by MAUCRSA.\textsuperscript{276} State law provides two distinct types of retailers: storefront (formerly known as “dispensaries”) and non-storefront. Each is discussed further below.

All retailers must comply with minimum security and transportation safety requirements for the commercial delivery of cannabis and cannabis products established in the California Code of Regulations, Title 16, Division 42 as well as those requirements identified in Division 10 of the Business and Professions Code.\textsuperscript{277}

A retailer must have a licensed premises, which is a physical location from which commercial cannabis activities are conducted, however, a retailer’s premises may be closed to the public, such that the retailer conducts sales exclusively by delivery.\textsuperscript{278}

All licensed retail premises must not be located within a 600-foot radius of a school, day care center, or youth center that is in existence at the time the license is issued, unless a licensing authority or a local jurisdiction specifies a different radius.\textsuperscript{279}

1. Storefront Retail (Formerly, “Dispensaries”)

The Bureau promulgated regulations for all retailers, which include a variety of requirements such as security, packaging, labeling, and operation of a retail business.\textsuperscript{280} Local jurisdictions may also regulate or prohibit retail businesses.\textsuperscript{281} Like other commercial cannabis activity, a local jurisdiction may regulate commercial cannabis retail businesses within its jurisdiction through its police power.\textsuperscript{282}

\textsuperscript{275} Bus. & Prof. Code, § 26055.  
\textsuperscript{276} Health & Saf. Code, § 11362.775.  
\textsuperscript{277} Cal. Code Regs., tit. 16, § 5300 et seq.; Bus. & Prof. Code, § 26070.  
\textsuperscript{278} Bus. & Prof. Code, § 26070, subd. (a)(1).  
\textsuperscript{279} Bus. & Prof. Code, § 26054, subd. (b).  
\textsuperscript{280} Cal. Code Regs., tit. 16, §§ 5400–5427.  
\textsuperscript{281} Bus. & Prof. Code, § 26055.  
\textsuperscript{282} Cal. Const., art. XI, § 7. See also City of Riverside v. Inland Empire Patients Health & Wellness Center, Inc. (2013) 56 Cal.4th 729, 737–38.
PRACTICE TIP: For retail facilities, many cities have adopted zoning regulations to identify appropriate commercial zones, development standards, and limitations on the number of retail facilities per zone. In addition to zoning regulations, a city may adopt regulations pertaining to retail operations to address health and safety concerns. Some examples of regulations that address health and safety concerns include limiting hours of operation, security requirements, storage, and restrictions on customer accessibility.

2. Consumption Lounges

Some store-front retailers may want to offer consumption lounges where the consumer may ingest, smoke, or vape the cannabis products on site. There is no separate state license category for on-site consumption. Business and Professions Code section 26200, subdivision (g) provides that, notwithstanding Health and Safety Code section 1362.3, subdivision (a), a local jurisdiction may allow for the smoking, vaporizing, and ingesting of cannabis or cannabis products on the premises of a retailer or microbusiness licensed under this division, if all of the following are met:

a. Access to the area where cannabis consumption is allowed is restricted to persons 21 years of age and older;

b. Cannabis consumption is not visible from any public place or nonage-restricted area; and

c. Sale or consumption of alcohol or tobacco is not allowed on the premises.

A store-front retailer that offers consumption on site is different from a temporary cannabis event licensee that offers consumption pursuant to California Code of Regulations section 5603. However, the above-identified criteria apply to both types of consumption, in addition to other state and local regulations relating to retailers and temporary cannabis events.

PRACTICE TIP: Consumption lounges are increasing in popularity, as they offer the public a safe place to consume or smoke cannabis and allow retail operators an opportunity to distinguish themselves from other retailers. As interest in consumption lounges increase, it is important to make sure that city regulations clearly indicate whether on-site consumption is allowed and under what conditions.

3. Prohibition on Free Cannabis Goods

A licensed retailer is prohibited from providing free cannabis goods to any person. However, a licensee who holds an M-Retailer license, an M-Retailer Non-storefront license, or an M-Microbusiness license that is authorized for retail sales may provide free medicinal cannabis goods, or donate cannabis goods and the use of equipment, if certain criteria are met.\(^{283}\) As of July 12, 2021, trade samples

283 Cal. Code Regs., tit. 16, § 5411, subds. (b) and (c).
between licensees may be permitted under new regulations.284

4. Non-Storefront Retail

A non-storefront retailer licensee is authorized to conduct retail sales exclusively by delivery.285 A non-storefront retailer is required to comply with all regulations relating to retail storefronts, except for those provisions relating to public access to the licensed premises and the retail area, as the non-storefront retail facility is closed to the public.286

5. Cannabis Deliveries

Licensed store-front retailers, non-storefront retailers, and microbusinesses can engage in delivery of cannabis and cannabis products.287 Deliveries are included as a type of commercial cannabis activity under Business and Professions Code section 26070.5.

The Bureau adopted minimum security and transportation safety requirements for the commercial delivery of cannabis and cannabis products.288 These regulations specify, among other things, requirements for delivery employees, technological platforms for delivery, authorized delivery locations, delivery vehicle requirements, allowed cannabis goods carried during delivery, delivery request receipts, and delivery routes. Some general requirements relating to the delivery vehicle include, but are not limited to, the following: the vehicle cannot have any markings or other indications on the exterior that can indicate it is used for cannabis delivery;289 the cannabis goods need to be locked in a fully enclosed box or container that is separate from the vehicle and secured to the vehicle;290 the delivery vehicle needs to have a dedicated Global Positioning System (GPS) used for the delivery vehicle only;291 and any vehicle used by a licensed retailer for delivery is subject to inspection by the state.292

Other regulations provide that the delivery driver cannot carry cannabis goods in the delivery vehicle with a value in excess of $5,000 at any time.293 Additionally, the delivery driver must be at least 21 years of age, must deliver to a physical address in California, and cannot deliver cannabis goods to an address on publicly owned land or in a building leased or owned by a public agency.294

Under AUMA, cities can ban or regulate deliveries within their borders.295 However, cities cannot prevent a delivery service from using public roads to pass through their jurisdiction.296

On January 25, 2019, the Bureau promulgated Regulation 5416 (d), which provides that a delivery employee may deliver to any jurisdiction within California provided that such delivery is conducted in compliance with all regulations in Division 42.

294. Cal. Code Regs., tit. 16, §§ 5415, 5416, subds. (a) and (c).
296. Bus. & Prof. Code, § 26090, subd. (e).
of Title 16 of the California Code of Regulations. Regulation 5416 (d) can arguably be interpreted to mean that delivery of cannabis goods is authorized in any city within California, regardless of whether the city regulates or bans deliveries within its borders.

However, in April 2019, a number of cities and the County of Santa Cruz filed a complaint against the Bureau challenging Regulation 5416 (d) and seeking judicial declarations that, among other things, the Bureau exceeded its authority in promulgating Regulation 5416 (d) and has no authority to preempt local control over commercial cannabis activities. In an order dated November 17, 2020, the trial court concluded that the issue was not ripe for decision because Regulation 5416(d) does not command local jurisdictions to do anything or preclude them from doing anything. Although the Bureau had taken a contrary position in a separate lawsuit, in this case the Bureau argued that Regulation 5416 (d) did not preempt local ordinances regulating deliveries. Concluding that the Bureau was not judicially estopped from arguing such a contrary position, the trial court agreed with the Bureau that Regulation 5416 (d) does not preempt or conflict with any local ordinances regulating or banning deliveries, nor does it preclude the plaintiffs from enforcing such ordinances. As such, the matter was not ripe for adjudication.

H. Cannabis Microbusinesses

A microbusiness is a business that engages in multiple areas of commercial cannabis activity. In order to hold a microbusiness license, a licensee must engage in at least three of the following commercial cannabis activities: cultivation, manufacturing, distribution, and retail sale. A microbusiness (Type 12 License) can be issued for a microbusiness that conducts cultivation of cannabis on an area less than 10,000 square feet and to act as a licensed distributor, Level 1 manufacturer, and retailer under this division, provided such licensee can demonstrate compliance with all requirements imposed by this division on licensed cultivators, distributors, Level 1 manufacturers, and retailers to the extent the licensee engages in such activities.

There were two different licensing authorities for a microbusiness prior to July 2021: the Bureau and the CDFA. With the passage of AB 141, all cannabis licensing authority rests with the DCC. The Bureau and the CDFA had each established a process by which an applicant for a microbusiness license can demonstrate compliance with all the requirements for the activities that will be conducted under the license.

A holder of a microbusiness license shall comply with the following:

a. A holder of a microbusiness license engaged in cultivation shall comply with all the rules and requirements applicable to the cultivation license type suitable for the cultivation activities of the licensee.

b. A holder of a microbusiness license engaged in manufacturing shall comply with all the rules...
Part 3 — Regulating Cannabis in Cities

and requirements applicable to a Manufacturer 1 license in Division 1 of Title 17 of the California Code of Regulations.

c. A holder of a microbusiness license engaged in distribution shall comply with all the rules and requirements applicable to a distributor license.

d. A holder of a microbusiness license engaged in retail sale shall comply with all the rules and requirements applicable to a retailer license, or a non-storefront retailer license if retail sales are conducted by delivery only.

All cultivation, manufacturing, distribution, and retail activities performed by a licensee under a microbusiness license shall occur on the same licensed premises. However, areas of the licensed premises for manufacturing and cultivation shall be separated from the distribution and retail areas by a wall and all doors between the areas shall remain closed when not in use.

A microbusiness licensee must comply with all the security rules and requirements applicable to the corresponding license type suitable for the activities allowed pursuant to that license. Suspension or revocation of a microbusiness licensee shall affect all commercial cannabis activities allowed pursuant to that license.

Like other commercial cannabis activities, a local jurisdiction may regulate cannabis microbusinesses within its jurisdiction through its police power.

I. Temporary Cannabis Events

A temporary cannabis event is an event where either the sale or consumption of cannabis will occur over a short period of time, and at a temporary location. A temporary cannabis event cannot exceed more than 4 consecutive days. “A temporary cannabis event may only be held at a county fair event, district agricultural association event, or at another venue expressly approved by a local jurisdiction for the purpose of holding a temporary cannabis event.” The location of a temporary cannabis event cannot be on premises licensed for the sale of alcohol or tobacco.

Practice Tip: “Premises” is defined as “the designated structure or structures and land specified in the application that is owned, leased, or otherwise held under the control of the applicant or licensee where the commercial cannabis activity will be or is conducted.” If the temporary cannabis event is part of a larger event, such as a street fair, the premises for the temporary cannabis event may not be the same as the premises for the larger event. Thus, alcohol could be served at the location where the larger event is occurring, unless a local ordinance provides otherwise.

301 Cal. Code Regs., tit. 16, § 5500, subd. (d).
302 Cal. Code Regs., tit. 16, § 5500, subd. (h).
303 Cal. Code Regs., tit. 16, § 5500, subd. (g).
304 Cal. Code Regs., tit. 16, § 5500, subd. (f).
305 Cal. Const., art. XI, § 7. See also Inland Empire, supra, 56 Cal. 4th at pp. 737-38.
306 Cal. Code Regs., tit. 16, § 5601, subd. (d).
307 Bus. & Prof. Code, § 26200, subd. (c)(f); see also Cal. Code Reg. tit. 16, § 5601 subd. (f).
308 Cal. Code Regs. tit. 16, §§ 5601, subd. (g); 5602, subd. (f); 5603, subd. (c).
309 Bus. & Prof. Code, § 26001, subd. (ap).
To organize a temporary cannabis event, the organizer must first obtain a cannabis event organizer license and then a temporary cannabis event license. The cannabis event organizer license regulates the organizer only and is an annual license. The temporary cannabis event license regulates the event itself, including by specifying when and where the onsite sale and consumption of cannabis goods is authorized.

Only a licensed retailer (whether storefront or non-storefront) or licensed microbusiness may sell cannabis at a temporary cannabis event. A licensed cannabis event organizer may not sell cannabis goods unless the organizer also holds a retailer, non-storefront retailer, or microbusiness license. Mobile sales are prohibited at a temporary cannabis event.

Cannabis consumption at a temporary cannabis event is restricted to persons at least 21 years of age or older. Onsite consumption must comply with any local regulations, including any smoking pollution control regulations.

Informational or educational cannabis events where there are no sales or consumption of cannabis goods do not require a state cannabis license.

J. Cannabidiol (CBD)

State and federal cannabidiol (CBD) law has recently gone through some significant changes with the passage of AUMA in California and the Federal Agriculture Improvement Act of 2018 (2018 Farm Bill).

CBD can be extracted from both cannabis and hemp plants. Cannabis CBD is extracted from cannabis, which is generally grown and consumed for its intoxicating properties. Cannabis plants are those that contain more than 0.3% tetrahydrocannabinol (THC).

Hemp CBD is sourced from industrial hemp plants, which are grown primarily for their fiber and seeds. Hemp plants are distinguished from cannabis plants in that hemp must contain no more than 0.3% THC.

At the state level, cannabis CBD is regulated by the CDPH, Manufactured Cannabis Safety Branch (MCSB). A business wishing to manufacture and sell cannabis CBD products, including edibles, must obtain state commercial cannabis licenses prior to operation.
Industrial hemp is expressly excluded from the state’s definition of cannabis. For this reason, Hemp CBD is largely unregulated. Since the hemp CBD products in topical and ingestible forms are often sold and marketed for health and wellness benefits, these products fall under the purview of the Federal Drug Administration (FDA) and CDPH, Food & Drug Branch (FDB) as a food, drug, or cosmetic. California law does not currently provide any requirements for the manufacturing, processing, or selling of non-food industrial hemp or hemp products.

Neither cannabis nor hemp CBD products are permitted as food additives. The FDB adopts federal law and policy pertaining to food, drugs, and cosmetics. The FDB concludes that CBD is, as a Schedule I drug, prohibited in conventional foods, drugs, and cosmetics. Therefore, the FDB found that CBD products derived from industrial hemp are likewise prohibited in food and drug retail within the state — this applies to human and animal foods. Industrial hemp CBD products are not approved in California as a “food, food ingredient, food additive, or dietary supplement.”

The FDB goes even further, maintaining that the state prohibition extends to the sale of topical creams and other products, because these items are typically marketed for their CBD content and therapeutic value. While enforcement has not been aggressive, the FDA has issued warning letters to companies selling CBD products stating that a company, by placing an unapproved new drug in the stream of commerce, is engaged in illegal activity. A product is a “drug” if its intended use is the “diagnosis, cure, mitigation, treatment, or prevention of disease,” which is largely determined by a company’s claims about the value of active ingredients (e.g. CBD) on its product labels and website.

The FDA has been sympathetic to CBD health benefit claims, and therefore has authorized clinical investigations to substantiate claims supporting CBD’s therapeutic value in the interests of consumer protection and public safety. The FDA has approved one CBD drug for the treatment of seizures. Because the FDA has recognized CBD as a pharmaceutical drug authorized for clinical investigations, any commercial product containing CBD and marketed for its therapeutic value would need to undergo the FDA’s rigorous drug approvals or else it will be treated by the federal government, and by the state FDB, as an illegal, unapproved new drug.

The law on industrial hemp cultivation is similarly being developed. In 2019, the California legislature passed Senate Bill (SB) 1409, which relaxes industrial hemp cultivation regulations. Nevertheless, if the FDB continues to follow federal policy on hemp, that SB 1409 has no impact on CDB’s use in edible or topical products. Also, the 2018 Farm Bill allows hemp cultivation broadly, not simply pilot programs for studying market interest in hemp-derived products. It explicitly allows hemp-derived products to be transferred across state
lines for commercial or other purposes. It also puts no restrictions on the sale, transport, or possession of hemp-derived products, so long as those items are produced in a manner consistent with the law.

Nevertheless, the CBD extracted from industrial hemp remains largely unregulated and to the extent that the FDA and FDB have taken positions, those positions are not well-known. Unregulated CBD sales have proliferated throughout California, creating practical and regulatory challenges for cities. The FDA reports that it will continue to focus on supporting scientific testing and approval of drugs that are derived from cannabis. The FDA also reports that it will solicit input on how to make legal pathways for the lawful marketing of these products and continue to protect and promote the public health. The drafters of this guide recommend checking the FDA’s website at fda.gov for the most up-to-date information on the FDA’s position CBD. These positions will inform the state FDB. The most up to date information from the state FBD can be found at cdph.ca.gov.
Cannabis operations impose financial challenges and benefits on both operators and regulators alike. The goal is to strike a balance that raises revenue (or, at minimum, defrays the cost of regulation) without driving operators out of business or otherwise deterring compliance, thereby indirectly perpetuating the illegal market. This chapter discusses financial tools for regulators, including the imposition of fees and taxes on cannabis operations, as well as laws affecting operators’ access to banking solutions.

I. FEES AND COSTS

A. Cost to Cities

The costs incurred by cities from cannabis operations may vary greatly depending on the unique local regulations of each jurisdiction. These costs may include costs associated with the processing and issuance of permits, initial and ongoing inspection costs, enforcement costs (including implementation of track-and-trace programs), and in some cases, costs associated with the use of public property.

B. Fees

Imposition of fees is one means of cost recovery attendant to local regulation. Under the California Constitution, fees are distinct from taxes as an exercise of local police powers to advance a regulatory purpose or recover costs for a benefit conferred or a service provided by a local agency. Taxes, however, are generally imposed for revenue purposes.322

1. The Distinction Between Fees and Taxes

The constitutional distinction between taxes and fees was clarified with the adoption of Proposition 26 in 2010, which defined local agency taxes under the California Constitution as:

. . . [A]ny levy, charge, or exaction of any kind imposed by a local government, except the following:

1. A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.

2. A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.

3. A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.

4. A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.

5. A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.

6. A charge imposed as a condition of property development.

7. Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.323

This definitional distinction is important because taxes are subject to approval by the electorate, while certain types of fees can be adopted without voter approval.324

However, Proposition 26 imposes a burden on local government agencies to demonstrate “by a preponderance of the evidence” that:

- A fee is not a tax;
- The amount of the fee is no more than necessary to cover the reasonable costs of the governmental activity; and
- The manner in which those costs are allocated to a payor bears a fair or reasonable relationship to the payor’s burdens on, or benefits received from, the governmental activity.325

There is some debate as to whether the foregoing burden applies to all seven fees and charges set forth in subsection (e) of section 1 of Article XIII C of the California Constitution, or to just the first three enumerated fees.326

2. Fees and Local Cannabis Regulation

a. Regulatory Fees

Fees “imposed for the reasonable regulatory costs to a local government” are undoubtedly one of the most commonly employed charges in the regulation of cannabis operations. To impose a regulatory fee a local agency must first establish a lawful regulatory process for the cannabis facilities in its jurisdiction.327 Consequently, the validity of any city fees will be constrained by the unique regulatory program of that city. Depending on the scope of a city’s regulatory scheme, appropriate fees could include recovery of the reasonable costs for:

- Review and processing of permit applications, including associated noticing and hearings;

323 Cal. Const. art. XIII C, § 1, subd. (e).
324 See Cal. Const. art. XIII C, § 2. See also Johnson v. County of Mendocino (2018) 25 Cal.App.5th 1017, 1032–1033 (construing Proposition 26, which amended section 3 of Article XIII C of the California Constitution, to hold that a charge on the gross receipts of commercial cannabis activities was a tax and not a fee).
325 Cal. Const. art. XIII C, §1, subd. (e).
327 See generally Newhall County Water Dist. v. Castaic Lake Water Agency (2016) 243 Cal.App.4th 1430, 1449, holding that a water district could not impose conservation rates on a water retailer for groundwater that it did not supply.
Investigation of prospective applicants;

Inspections of the premises, products, equipment, and personnel involved in the operation;

Review of the tracing and tracking of cannabis and cannabis products, including any license or access fees to intellectual property employed in the process;

Auditing transactional records; and

Reasonably anticipated costs for administrative enforcement of the agency’s regulations.

Proposition 26 is generally perceived as having eliminated an agency’s ability to impose a regulatory fee directed at mitigating the adverse impacts of the regulated product or business. However, agencies may be able to impose such impact fees as part of a land use approval. (See discussion of Fees Imposed as a Condition of Property Development below.)

In determining whether a regulatory fee satisfies Proposition 26’s constraints, it is not normally necessary to finely calibrate the fee to each individual subject to the fee. Instead, the fee is measured collectively. Proposition 26 should be satisfied if the fee does not “exceed the reasonable cost of regulation with the generated surplus used for general revenue collection.”

**Practice Tip:** It is critical to create and maintain detailed records showing how the costs of the regulatory program were determined, and how those costs were spread among the fee payors. Determining a reasonable estimate of costs may prove challenging when establishing a new regulatory program with no prior history for such things as anticipated enforcement costs. You may want to look to the experience of other more established regulatory schemes in similar jurisdictions to gather evidence about likely costs.

b. Fees Imposed as a Condition of Property Development

Proposition 26 recognizes the longstanding ability of cities to impose fees as a condition of property development. If a cannabis operation must obtain a land use permit, the governing agency has an additional opportunity to recover fees. Development fees include the costs of reviewing and processing the application for the proposed project, and the costs to mitigate the adverse impacts of the proposed project and to provide for public facilities and services. Development fees afford local agencies a means to recover funds necessary to mitigate impacts to natural resources and public facilities caused by the cultivation, manufacturing, and processing of cannabis and cannabis products, such as impacts on water supplies and infrastructure, transportation, air quality, and farmland.

---

330 Cal. Const. art. XIII C, §1, subd. (e)(6).
In order to pass constitutional muster, development fees that are imposed as a condition of development must have a logical “nexus” between the impacts of the development and the purpose for which the fee is imposed, as well as “rough proportionality” in “nature and extent to the impact of the proposed development.”

Additionally, the Mitigation Fee Act places further restrictions on the imposition and use of development fees. Pursuant to the Act, an agency imposing the fee must:

1. Identify the purpose of the fee.
2. Identify the use to which the fee is to be put. If the use is financing public facilities, the facilities shall be identified. That identification may, but need not, be made by reference to a capital improvement plan, may be made in applicable general or specific plan requirements, or may be made in other public documents that identify the public facilities for which the fee is charged.
3. Determine how there is a reasonable relationship between the fee’s use and the type of development project on which the fee is imposed.
4. Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed.

If the fee is imposed as a condition of approval, “the local agency shall determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.” The funds must be deposited in a separate account. The Act sets forth various noticing and reporting requirements, procedures for adopting fees, and provides for return of the collected funds if a date is not timely set for the commencement of the mitigation on which the funds are to be spent.

c. Fees for Use of Government Property

Some cities allow the use of their facilities, such as fairgrounds, for cannabis events. Under Proposition 26, fees charged for use of government property are one of the exceptions to the general rule that any levy, charge, or exaction is a tax. Historically, this type of fee has not been limited to recovery of an agency’s costs, allowing the agency to charge whatever the market would bear. Whether Proposition 26 changed the common law is subject to debate.
Part 4 — Finance and Taxation

Practice Tip: When enacting fees related to water use by cannabis cultivators, it is important to build a clear record of the purpose for the fee. If the charge is for regulating the use of the water to avoid adverse impacts on water supplies, rather than on merely supplying the water, then the fee should not be subject to the onerous procedural requirements that apply to property-related fees.

While property-related water, sewer, and refuse collection fees are subject to the substantive and majority protest requirements of Proposition 218, these fees are exempt from the voter-approval requirement that applies to all other property-related fees. Procedurally, before adopting a property-related fee, a local agency must:

- Identify the parcels on which a fee or charge is proposed;
- Calculate the amount of the proposed fee or charge on each parcel in light of cost-justification requirements of article XIII D, section 6, subsection b of the California Constitution;
- Provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel on which the fee or charge is proposed; and

---

d. Property-Related Fees

Proposition 218 as adopted by the voters in 1996 created special rules for fees “imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service.”

In the context of cannabis regulation, property-related fees can arise for water irrigation charges related to cultivation. In this regard, the courts have drawn a distinction between delivery of water and regulation of groundwater. While charges for supplying water through an established connection are property-related service fees, charges on groundwater pumping for the purpose of “the conservation of limited groundwater stores, and remediation of the adverse effects of groundwater extraction,” are not considered property-related, but regulatory.

---

344 City of San Buenaventura v. United Water Conservation Dist. (2017) 3 Cal.5th 1191, 1208.
345 Cal. Const., art. XIIID, §6, subd. (c).
346 Cal. Const., art. XIIID, §6, subd. (a)(f).
347 Cal. Const., art XIII D, §6, subd. (a)(f).
348 Cal. Const., art. XIIID, §6, subd. (a)(f).
Part 4 — Finance and Taxation

- Conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee.\(^{349}\)

At the public hearing, “[i]f written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.”\(^{350}\)

Property-related fees other than water, sewer, or refuse charges must then be approved by a majority of property owners or two-thirds of registered voters.\(^{351}\)

Substantively, property-related fees must meet the following requirements:

- Revenue derived from the fee or charge must not exceed the funds required to provide the property-related service;
- Revenue from the fee or charge must not be used for any purpose other than that for which the fee or charge was imposed;
- The amount of the fee or charge imposed on any parcel or person must not exceed the proportional cost of the service attributable to the parcel on which it is imposed;
- The fee or charge may not be imposed for service unless the service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not allowed. Stand-by charges must be classified as assessments and must not be imposed without compliance with the proportionality requirements and property-owner mailed ballot protest proceedings for assessments; and
- No fee or charge may be imposed for general governmental service, where the service is available to the public in substantially the same manner as to property owners (e.g., police, fire, ambulance, or library services).\(^{352}\)

II. TAXES

A. State Taxes

1. Sales and Use Tax

The general California sales and use tax on all tangible retail goods, including cannabis and cannabis products, is 7.25%. Cities may impose their own sales taxes, subject to the Bradley-Burns Uniform Local Sales and Use Tax Law,\(^{353}\) resulting in total sales taxes of between 9 and 11%. The retail sales of medicinal cannabis, medicinal cannabis concentrate, edible medicinal cannabis products, and topical medicinal cannabis are exempt from these sales and use taxes when the customer provides a valid Medical Cannabis Identification Card (MCIC) indicating they are a qualified patient (or the primary caregiver for a

\(^{349}\) Cal. Const., art. XIIID, § 6, subd. (b).

\(^{350}\) Cal. Const., art. XIII D, § 6, subd. (a)(2).

\(^{351}\) See Cal. Const., art. XIII D, §6, subd. (c).

\(^{352}\) Cal. Const. art. XIII D, §6, subd. (b).

\(^{353}\) Rev. & Tax. Code, § 7200 et seq.
qualified patient), and a valid government-issued identification card. Cannabis retailers, cultivators, manufacturers, and distributors making sales must register with the California Department of Tax and Fee Administration (CDTFA) for a seller’s permit to report and pay any sales and use tax due to the CDTFA.

2. Cannabis Excise Tax

State law also establishes two statewide taxes specific to cannabis. The first is a cannabis excise tax that is imposed upon the purchaser of cannabis or cannabis products at the rate of 15% of the average market price of any retail sale by a cannabis retailer. The average market price for an arm’s-length transaction is defined as the wholesale cost of the product plus a mark-up, which is determined by the CDTFA on a biannual basis in six-month intervals. In a non-arm’s-length transaction, the average market price is defined as the cannabis retailer’s gross receipts from the sale.

The cannabis excise tax does not apply to medicinal cannabis or medicinal cannabis products donated for no consideration to qualified patients. Retailers are responsible for collecting the cannabis excise tax from purchasers at the time of the retail sale and for paying the tax to the distributor.

3. Cannabis Cultivation Tax

The second statewide cannabis-specific tax is a cultivation tax that is imposed on all cultivators. The cannabis cultivation tax is imposed at the following rates: (1) cannabis flowers are $9.25 per dry-weight ounce, (2) cannabis leaves are $2.75 per dry-weight ounce, and (3) fresh cannabis plants are $1.29 per ounce. The CDTFA is required to annually adjust the cannabis cultivation tax rates for inflation.

The cultivation tax applies to all harvested cannabis that enters the commercial market. All cannabis removed from a cultivator’s premises are presumed taxable, except for plant waste or medicinal cannabis or medicinal cannabis products designated for donation. The tax does not apply to cannabis cultivated for personal use, or cultivated by a qualified patient or primary caregiver in accordance with the CUA.

Cultivators are responsible for paying the cultivation tax to the distributor or to the manufacturer if the first transfer or sale of unprocessed cannabis is to a manufacturer. Manufacturers that collect the cultivation tax are required to pay the tax to the
distributor. The distributor, which must register with the CDTFA for a cannabis tax permit, reports and pays the cultivation tax and cannabis excise tax to the CDTFA.

B. Local Taxes

For general guidance on implementing new taxes, see League of California Cities, Propositions 26 and 218 Implementation Guide (2019), pp. 16-25; The California Municipal Law Handbook (Cal CEB) §§ 5.96 – 5.123, 10.244

Cities have employed a wide range of tax strategies, including:

1. Percent of Gross Sales

Many cities have opted to tax cannabis businesses by implementing a voter-approved tax on a percentage of gross sales receipts. The approved tax rates range from 2 to 20%. Some cities tax different segments of the industry at different rates, often levying higher rates on retailers and lower rates on, for example, cannabis testing labs. This is not a consumer sales tax and is a tax levied on the business.

PRACTICE TIP: Because this local tax will be placed on top of the state’s 15% excise tax, a city may opt to propose these tax rates as “up to” those maximum amounts (or even with explicit ballot language authorizing tax rate decreases below a set maximum tax rate without returning to the voters), with initial rates set lower. The purpose would be to give law-abiding operators an opportunity to establish themselves and compete with entrenched illegal market dealers. The trend among cities is to decrease taxes in order to lessen the financial burden on legitimate businesses, so that they can better compete with the illegal market.

2. Dollar Per Square Foot of Business Space

This method is mostly used for cultivators. Rates appear to range from $1 to $25 per square foot, with initial rates often set lower. Several cities tax indoor growers more than outdoor growers. Others set gradually decreasing rates based on size – e.g., $10 per square foot for the first 5,000 square feet and gradually dropping to $2 per square foot for space beyond 40,000 square feet.

3. Miscellaneous

Depending on the segment of the industry, cities have charged annual flat rates, dollar amounts per vehicle of a distributor’s fleet, and dollar amounts per gram of oil or piece of edible produced. They have also set “tax floors” – i.e., a minimum tax that is imposed, regardless of gross sales, whether a business makes a profit or suffers a loss. As a policy matter, some cities tax medicinal cannabis purveyors at significantly lower rates than adult-use cannabis operators.

PRACTICE TIP: Mix and match. None of the above strategies are mutually exclusive. Whichever the city employs, the key is to strike a balance so that taxes are not so high that they deter operators from doing business legitimately and encourage them to continue in the illegal market.

4. Development Agreements

Because it can take months and be very expensive to get tax measures on a ballot, some cities opt to
Let cannabis businesses open before taxes are in place to give local operators a competitive edge. In such instances, also as a way to “test the waters,” some cities have entered into development agreements (with corresponding annual development fees) with cannabis businesses.

**Practice Tip:** While the potential for revenue may be appealing, a development agreement provides the holder a vested right to continue the operation for the term of the agreement. Approval of a development agreement is also a legislative act that can be the subject of a referendum. Cities should carefully consider the risks and benefits before granting a long-term, contractual right to operate a cannabis business. A less risky practice is to follow the business and land use regulation models discussed earlier in this Guide. Additionally, whether development agreements are merely placeholders until a tax measure can be approved or permanent solutions, cities should note that entering into a development agreement in lieu of a formal tax measure could expose them to liability for violating Proposition 218, which requires voter approval for all new taxes.

### III. Banking

It is commonly believed that banks and other financial institutions are prohibited from doing business with the cannabis industry. Technically, this is not the case. As a practical matter, however, financial institutions refuse to work with cannabis businesses directly to avoid the burdensome duties and risks associated with doing so. As described further below, this refusal creates a de facto ban on banking that prevents the complete legitimization of the cannabis industry, and places a significant burden on cannabis businesses and the cities that seek to collect tax and fee revenue from them.

#### A. Federal Law

Federal law pertaining to cannabis banking includes the Currency and Foreign Transactions Reporting Act of 1970, which is commonly referred to as the Bank Secrecy Act (BSA), as well as guidance by the U.S. Department of Treasury’s Financial Crimes Enforcement Network (FinCEN), which administers the BSA.

1. **The Bank Secrecy Act**

The BSA requires U.S. financial institutions to assist U.S. government agencies in detecting and preventing money laundering. Specifically, the Act requires financial institutions to keep records of cash purchases of negotiable instruments, file reports of cash transactions exceeding $10,000

---

367 31 U.S.C. § 5313; 31 C.F.R. § 1020.315
and to report suspicious activity that might signify money laundering, tax evasion, or other criminal activities like the sale of Schedule I drugs.\textsuperscript{368}

\section*{2. FinCEN Guidance}

In 2014, FinCEN issued guidance (FinCEN Guidance) regarding “BSA Expectations Regarding Marijuana-Related Businesses.”\textsuperscript{369} This guidance included establishing best practices for customer due diligence, a Suspicious Activity Report (SAR) filing structure, and ways to identify business red flags. The FinCEN Guidance provided that, in assessing the risk of providing services to a cannabis-related business, institutions should conduct extensive customer due diligence that includes verifying state licenses, reviewing license applications and other documentation, understanding the expected activity of the business, and performing ongoing monitoring for suspicious activity.

Financial institutions must also file a SAR on any activity involving a cannabis business. Generally, BSA regulations require the filing of a SAR when a financial institution knows, suspects, or has reason to suspect that a transaction: (1) involves funds derived from illegal activity or is an attempt to disguise funds derived from illegal activity; (2) is designed to evade regulations promulgated under the BSA; or (3) lacks a business or apparent lawful purpose. Since federal law prohibits the distribution and sale of cannabis, this means a SAR must be filed for every activity with a cannabis business, regardless of state law.

With this in mind, the FinCEN Guidance established a three-tier SAR reporting regime for cannabis businesses that denotes the type of activity involved:

1. “Marijuana Limited” SAR Filing. This report is used when the institution reasonably believes that the cannabis business is consistent with state law and does not violate any of the eight Department of Justice (DOJ) priorities set forth in the Cole Memo,\textsuperscript{370} such as sales to minors;

2. “Marijuana Priority” SAR Filing. This report is used when the institution reasonably believes that the cannabis business has violated one of the Cole Memo DOJ priorities, or the business is not in full compliance with state law requirements; and

3. “Marijuana Termination” SAR Filing. This report is used when the institution deems it necessary to terminate the relationship with the cannabis business “in order to maintain an effective anti-money laundering compliance program.”

Furthermore, the FinCEN Guidance also provides a long list of “red flags” that indicate that a cannabis business may be engaged in activity that implicates the Cole Memo priorities or violates state law. These signs may be circumstances that include: the business receiving substantially more revenue

\begin{itemize}
  \item \textsuperscript{368} 31 U.S.C. § 5313-5316; 31 C.F.R. § 1020.320.
  \item \textsuperscript{370} James M. Cole, Deputy Attorney General, U.S. Department of Justice, Memorandum for All United States Attorneys: Guidance Regarding Marijuana Enforcement (August 29, 2013), available at http://www.justice.gov/iso/opa/resources/305201382913756857467.pdf. The Cole Memo provided a safe harbor from prosecution — including to financial institutions serving the cannabis industry, upon which the FinCEN Guidance is based — provided if federal priorities were met or protected. On January 4, 2018, then-Attorney-General Jeff Sessions announced the rescission of the Cole Memo. Over a year later, on January 31, 2019, FinCEN issued a statement noting “FinCEN’s February 2014 guidance remains in place.” Letter from Drew Maloney, Assistant Sec’y for Legislative Affairs, FinCEN, to Representative Denny Heck (Jan. 31, 2019). See discussion of Federal Controlled Substances Act for more information on the Cole Memo and federal enforcement.
\end{itemize}
than may reasonably be expected, rapid deposits of cash followed by immediate cash withdrawals, the business has been subject to an enforcement action, or a purported non-profit business is making excessive payments to its managers or employees. These red flags, the FinCEN Guidance provides, may indicate a need for additional due diligence.

Finally, the FinCEN Guidance reminds financial institutions that they must file currency transaction reports for cannabis businesses the same as they would for other businesses. This means, for instance, that banks need to file reports on the receipt of withdrawal by any person of more than $10,000 in cash per day.

**B. Legislative Fixes and Alternative Solutions**

Given the added burden of cannabis-specific customer due diligence and heightened risk of criminal violations of the BSA/AML by failing to report possible breaches of the DOJ’s priorities in the Cole Memo, most federally chartered banks will simply refuse to serve cannabis-related businesses. While the Congressional Cannabis Caucus supports federal legislation to both remove cannabis from Schedule I of the Controlled Substances Act and provide a safe haven for financial institutions to do business with the cannabis industry in states that have legalized medicinal or adult-use cannabis, certainty remains elusive on the federal level.

To get around this obstacle, California has conducted research into the heavier reliance on credit unions, the establishment of a state-chartered bank that would bypass the Federal Reserve, and the development of cryptocurrencies. Private entrepreneurs have also developed “closed-loop” app solutions for the industry, but by and large, cannabis in California still remains a predominantly cash-based business, resulting in extreme challenges for cities when it comes time to collect taxes and fees.

**IV. FEE AND TAX COLLECTION CONSIDERATIONS**

Transparent communication is key to providing cannabis businesses the assurance that their fees and taxes will be secure upon payment. Cities have experienced that cannabis fees and taxes are often paid in cash, creating a significant safety and security concern for both the cannabis business and the city in which it is located. This concern has prompted cities to implement a fee and tax collection program aimed at mitigating security risks without compromising convenience, security, and logistical ease.

Some practical issues with fee and tax collection include:

- Transportation and security risks, like armed robbery and accompanying violence; and
- Time and place of fee and tax collection.

**PRACTICE TIP:** Prudent practice includes providing a direct contact to set up individualized appointments for the collection of fees and taxes. The individual appointments should be coordinated with the finance department and police department for additional security.

---

371 This approach has been generally unsuccessful in other jurisdictions and most recently suffered a setback at the Tenth Circuit Court of Appeals. See *Fourth Corner Credit Union v. Federal Reserve Bank of Kansas City* (10th Cir. 2017) 861 F.3d 1052 (reversing and remanding trial court’s order with instructions to dismiss credit union’s complaint filed to order the Federal Reserve to issue a “master account” to the credit union for the purpose of serving the banking needs of the cannabis industry in Colorado).
**PRACTICE TIP:** Since many financial institutions are wary of potentially violating federal anti-money laundering and other laws related to engaging in transactions with the proceeds from cannabis businesses, cities should keep meticulous records of cannabis fee and tax revenues in the event of a bank or other governmental audit.

**PRACTICE TIP:** Check with the risk management department of your city’s financial institution before adopting fees or taxes for which the city will be collecting money from cannabis businesses. After adoption of AUMA, some risk management departments of banks have issued guidance on whether the bank will accept funds that have derived from fees and taxes from cannabis businesses.
PART 5 | Enforcement Tools

Both AUMA and MAUCRSA included language intended to preserve a municipality’s ability to regulate commercial cannabis activity within its jurisdictional boundaries. A city “has a constitutional right to ‘make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws.’” Consistent with this constitutional principle the statute states:

This division shall not be interpreted to supersede or limit the authority of a local jurisdiction to adopt and enforce local ordinances to regulate businesses licensed under this division, including, but not limited to, local zoning and land use requirements, business license requirements, and requirements related to reducing exposure to secondhand smoke, or to completely prohibit the establishment or operation of one or more types of businesses licensed under this division within the local jurisdiction.372

Therefore, a commercial cannabis business may be regulated or completely prohibited by a city.

Cities may consider a variety of options and tools when enforcement against unlawful cannabis operations is necessary.373 Potential enforcement tools include civil injunctions, criminal enforcement, and administrative enforcement. Each city may evaluate the most appropriate tool or tools for the situation.

I. CIVIL ENFORCEMENT

A. Civil Injunction

Cities may consider seeking injunctions to close unauthorized cannabis operations. State law authorizes courts to issue temporary restraining orders, and preliminary and permanent injunctions. Section 527(a) states, “A preliminary injunction may be granted at any time before judgment upon a verified complaint, or upon affidavits if the complaint in the one case, or the affidavits in the other, show satisfactorily that sufficient grounds exist therefor.”

The traditional test for issuance of a preliminary injunction requires the court to weigh two interrelated factors: (1) the likelihood that the moving party will prevail on the merits; and (2) the relative interim harm to the parties from the issuance or non-issuance of the injunction.374 The court evaluates the two factors on a sliding scale, such that “if the party seeking the injunction can

372 Bus. & Prof. Code, § 26200, subd. (a).
Code Civ. Proc., § 527(a) (Emphasis added).
373 See Appendix 1 regarding selection of defendants in cannabis enforcement.
make a sufficiently strong showing of likelihood of successes on the merits, the trial court has discretion to issue the injunction notwithstanding that party’s inability to show that the balance of harms tips in his favor.”

Where a city seeks to enjoin the violation of a law and the city is likely to prevail on the merits, courts generally are to presume that public harm will result if an injunction is not issued. No showing of actual harm is required. In extreme circumstances when the cannabis operator fails to comply with the injunction, it could be enforced through contempt or the appointment of a receiver.

B. Nuisance Per Se and Cannabis Law

A nuisance per se exists whenever “a legislative body with appropriate jurisdiction, in the exercise of the police power, expressly declares a particular object or substance, activity, or circumstance, to be a nuisance.” A nuisance may be established and enjoined through state or local law.

The role of the court in an action to enjoin nuisance activity is limited to determining whether a statutory violation in fact exists, and whether the statute is constitutionally valid.

Accordingly, a nuisance per se arises whenever an activity occurs that a city or the state has expressly declared to be a nuisance. Stated differently, the only element a city must satisfy for a cannabis business to be a nuisance per se is that the business engaged in an activity declared to be a nuisance under state or local law.

As discussed in Part 2 of this Guide, the development of California’s cannabis law supports enforcement through nuisance injunctions, as earlier case law confirmed local land use authority over cannabis activity. Additionally, under state law, a commercial cannabis business may be regulated or completely prohibited by a city.

1. Establishing Nuisance Through Violation of Municipal Code

Commercial cannabis businesses may be specifically prohibited throughout a city and thus constitute a prohibited land use in the city. A city ordinance may provide that any violation of the zoning code is deemed a public nuisance, and that any such violations may be remedied by the city through whatever civil remedies are available, including a civil action for injunctive relief. Violations of municipal laws prohibiting cannabis businesses

---

Meese (1987) 43 Cal.3d 1217, 1227 (”[T]he more likely it is that [the moving parties] will ultimately prevail, the less severe must be the harm that they allege will occur if the injunction does not issue.”).

376 IT Corp. v. County of Imperial (1983) 35 Cal.3d 63, 72.

380 City of Bakersfield v. Miller (1966) 64 Cal.2d 93, 100; See also Beck Development Co. v. Southern Pacific Transportation Co., supra, 44 Cal.App.4th at p. 1207 (“Where the law expressly declares something to be a nuisance, then no inquiry beyond its existence need be made…”).

381 Bus. & Prof. Code, § 26200, subd. (a).

382 Many municipal ordinances may be enforced civilly without designating cannabis activities as a specific nuisance per se.
have been upheld as nuisances per se subject to abatement by injunction. 383

In City of Claremont v. Kruse, 384 the court affirmed a trial court’s permanent injunction that enjoined the operation of a cannabis distribution facility anywhere within the City of Claremont. 385 The court analyzed whether there was express or implied preemption by the CUA or MMPA that would prevent local regulations, such as bans, from restricting the establishment of cannabis dispensaries. 386 The court found that neither the CUA nor the MMPA expressly or impliedly preempts local laws in any way. 387

Kruse followed the holding in City of Corona v. Naulls (2008). 388 In Naulls, the court affirmed the issuance of a preliminary injunction to shut down a medicinal cannabis dispensary that was operating without any zoning designation. The Naulls court held that “where a particular use of land is not expressly enumerated in a city’s municipal code as constituting a permissible use, it follows that such use is impermissible.” 389 Accordingly, the court held that the cannabis dispensary was “a nuisance per se, subject to abatement in accordance with the City’s municipal code.” 390

In County of Los Angeles v. Hill, 391 the court confirmed that local governments have the ability to regulate the establishment of cannabis dispensaries. There the court stated, “If there was ever any doubt about the Legislature’s intention to allow local governments to regulate marijuana dispensaries, and we do not believe there was, the newly enacted section 11362.768, has made clear that local governments may regulate dispensaries.” 392 Thus, a city has the power to restrict not only where a cannabis business may operate (i.e. the location of a dispensary), but also whether it may operate at all.

Although the foregoing cases were decided prior to the passage of AUMA, they still provide legal authority for local regulations relating to commercial cannabis. The opinions in Naulls, Kruse, and Hill support enforcement by enjoining unlawful cannabis businesses. An injunction to prohibit the continuing nuisance is an appropriate enforcement tool, and a city is likely to prevail on the merits of its public nuisance claim based on violations of local law.

PRACTICE TIP: An ordinance may expressly declare some or all commercial cannabis activity to be unlawful. For example, one ordinance provides as follows: “It shall be unlawful for any person or entity to own, manage, conduct, or operate ... any commercial cannabis activity or to participate as a ... employee, contractor, agent or volunteer, or in any other manner or capacity, in any commercial cannabis activity.”

385 Kruse, supra, 177 Cal.App.4th at p. 1158.
386 Id. at pp. 1172-1176.
387 Id. at p. 1176.
388 166 Cal.App.4th 418 (hereinafter Naulls).
389 Naulls, supra, 166 Cal.App.4th at p. 433 (emphases in original).
390 Ibid.
**PRACTICE TIP:** Review your city’s municipal code for additional violations that may be alleged in the complaint in addition to the cannabis ordinance. Often building code, electrical code, property maintenance, business license, or zoning violations are present, which may also be alleged in the complaint.

2. Establishing Nuisance through Violation of State Law

A nuisance per se supporting an injunction may also be established through violations of state law. Civil Code section 3479 and Health and Safety Code section 11570 both expressly declare particular activities to be a nuisance, and may be used for a nuisance per se claim. Compliance with state and local cannabis law is required in order to lawfully engage in commercial cannabis activities. A defendant business may raise compliance with state and local law as an affirmative defense in a nuisance action.

a. Civil Code section 3479

Civil Code section 3479, describes a nuisance, in pertinent part, as: “Anything which is injurious to health, including, but not limited to, the illegal sale of controlled substances, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property...” Accordingly, showing that a cannabis business engaged in the “the illegal sale of controlled substances” is all that is required for a nuisance per se claim based on Civil Code section 3479. Cannabis remains a Schedule I controlled substance. Unless properly licensed and allowed by state and local authorities, the sale of cannabis is illegal. Thus, a cannabis business engaged in the illegal sale of cannabis is a nuisance per se subject to abatement and injunction.

b. Health and Safety Code section 11570

The California Drug Abatement Act allows cities to remove occupants from any building or place where any illegal drug activity occurs. Every building or place used for the purpose of drug activity is expressly declared a nuisance. “Cannabis” is listed as a controlled substance under Health and Safety Code section 11054, subdivision (d)(13).

Accordingly, evidence that a cannabis business used a building or place “for the purpose of unlawfully selling, serving, storing, keeping, manufacturing, or giving away any controlled substance” is all that is required for a nuisance per se claim based on Health and Safety Code section 11570.

The sale of cannabis is illegal when not conducted in conformance with state and local law. In
People ex rel. Trutanich v. Joseph, the court affirmed the trial court’s entry of judgment against a defendant dispensary owner after the trial court granted a motion for summary judgment and a motion for permanent injunctive relief for violations of the narcotics abatement law. The court observed that:

Plaintiff presented admissible evidence that [the marijuana dispensary’s] premises were used ‘for the purpose of unlawfully selling, serving, storing, keeping, manufacturing, or giving away a[] controlled substance,’ in violation of section 11570. Such violations constitute nuisances per se under Civil Code section 3479.

The Court affirmed summary judgment of a permanent injunction against the defendant without placing any burden on the city to prove the defendant’s non-compliance with the CUA or the MMPA. Joseph also held that “Section 11362.775 ... does not cover dispensing or selling marijuana.” Thus, a city is likely to prevail on the merits of a nuisance per se claim against a dispensary, whether based on local law, Civil Code section 3479 or Health and Safety Code section 11570.

In addition to injunctive relief, the Drug Abatement Act provides for unique remedies, including civil penalties up to $25,000, attorney’s fees, costs of investigation, vacated and boarded against entry for up to one year, a lien on the property, for the lien to be enforced through the sale of the property, among others.

**PRACTICE TIP:** The Drug Abatement Act is particularly useful to compel the cooperation of a property owner where the property is occupied by a tenant. The potential liability of the property owner (a $25,000 fine, attorney’s fees that can be liened, closure of the building for a year preventing re-renting, and possible sale of the fixtures and property itself) is often enough to cause the property owner to collaborate with the City to eject the dispensary in order to avoid these severe remedies.

a. Business and Professions Code sections 17200 et seq.

Known as the Unfair Competition Law, Business and Professions Code sections 17200 et seq. authorizes certain remedies to address repeated

407 Health & Saf. Code, § 11573.5, subd. (b).
408 Health & Saf. Code, § 11585.
violations of state and local regulations, so long as they are a part of a “business practice.”

An action under the Unfair Competition Law is usually brought by the Attorney General or a district attorney; but a city attorney may bring such an action if the city has a population greater than 750,000 or if the city attorney obtains the consent of the district attorney.

b. Business and Professions Code section 26038

MAUCRSA imposes civil penalties for unlicensed commercial cannabis activity “of up to three times the amount of the license fee for each violation, and the court may order the destruction of cannabis associated with that violation in accordance with Section 11479 of the Health and Safety Code.” This penalty is payable to the city, and a separate penalty may be assessed for each day a violation persists.

II. CRIMINAL ENFORCEMENT

Criminal enforcement is an important function of local government and should be considered alongside administrative and civil enforcement as an option to achieve code compliance in a given case. Criminal enforcement requires different focus and resources than civil enforcement. Criminal enforcement often requires schedule flexibility and a consistent presence in court. Whether to criminally prosecute a code violation raises the question of the goals of criminal prosecution. In general, there are three goals: (1) abatement of the violation, (2) punishment, and (3) deterrence. While abatement is generally the primary goal, the other goals may be equally important in the context of cannabis prosecutions. Punishment commensurate with the crime can be appropriate, and imposition of punishment will deter future criminal activity.

The criminal enforcement portion of this chapter will introduce the substantive law and provide practice tips. It is not possible to cover every issue that will confront a city attorney in a criminal prosecution. This section will attempt to provide some legal background and practical guidance specific to cannabis. For additional information on criminal code enforcement, see Cal. Municipal Law Handbook (Cal CEB 2019) Code Enforcement, Chapter 12 and for information on criminal law generally, see California Criminal Law Procedure and Practice (Cal CEB 2019).

A. Prosecution of Municipal Code Violations

City attorneys have the authority to prosecute misdemeanor criminal cases to enforce city ordinances in the name of the People of the State of California. Accordingly, this section will focus on the criminal laws most likely to be enforced by a city attorney, namely, municipal codes. Certain categories of violations are typical of cannabis-related activity. Most commonly, criminal cannabis activity implicates a city’s cannabis ordinance and zoning regulations. Commercial cannabis activity, such as an illegal dispensary or cultivation operation, also implicates a city’s business license requirements and property maintenance requirements. Establishment or operation of an

411 Bus. & Prof. Code, § 17204.
412 Bus. & Prof. Code, § 26038, subd. (a).
413 Bus. & Prof. Code, § 26038, subd. (b).
414 Bus. & Prof. Code, § 26038, subd. (a).
415 Gov. Code, § 36900, subd. (a).
unlawful commercial cannabis business often entails routine code enforcement violations, such as building or public nuisance violations. While a single act may constitute a violation of several ordinances, keep in mind the prohibition on multiple punishments.\textsuperscript{416}

A violation of a city ordinance is a misdemeanor, unless it is made an infraction by ordinance.\textsuperscript{417} Violations of ordinances that are otherwise misdemeanors can generally also be charged as or reduced to infractions in the discretion of the prosecuting attorney.

A misdemeanor is punishable by six months in jail, a $1,000 fine, or both, unless otherwise provided in an ordinance.\textsuperscript{418} An infraction violation of an ordinance is punishable by a $100 fine, with fines increasing upon repeated violations.\textsuperscript{419}

Where the unlawful cannabis activity is highly profitable, misdemeanor prosecutions are generally considered to be more effective than infraction prosecutions given the increased penalties for misdemeanors and the possibility of jail time. The minor punishment involved in infraction prosecutions may cause the fines to be viewed simply as a “cost of doing business.” Note that if the prosecuting attorney elects to proceed as a misdemeanor, the case will be more complex, time-consuming, and costly for the city. When charged with a misdemeanor, a defendant has the right to an attorney and a jury trial.\textsuperscript{420}

For further discussion regarding criminal enforcement of misdemeanors see Appendix I.

**B. Prosecutions of State Law Violations**

In general, state law misdemeanors must be prosecuted by the district attorney unless a city attorney is authorized to bring prosecutions by the district attorney.\textsuperscript{421} However, county district attorney’s offices are often reluctant to prosecute cannabis crimes, since the consumption of cannabis has become normalized in many jurors’ minds. Nevertheless, state law prosecutions may be more viable in the more egregious cases that may interest prosecutors.

**C. Criminal Investigations**

Even though district attorneys may not be eager to prosecute state law cannabis crimes, the suspected violations may still be the basis of a criminal investigation by peace officers. Peace officers have unique resources, training, experience, and expertise to handle cannabis enforcement efforts. This is especially the case with illegal cannabis cultivation sites, which can be dangerous.

One criminal investigation tool that law enforcement agencies can employ is their access to power usage records to identify suspected illegal cannabis cultivation sites.\textsuperscript{422} That information can also be used by the law enforcement agency to obtain a criminal search warrant. The benefit of a criminal search warrant is that peace officers can seize any controlled substances and paraphernalia

\textsuperscript{417} Gov. Code, § 36900, subd. (a).
\textsuperscript{418} Pen. Code, § 19.
\textsuperscript{419} Gov. Code, § 36900.
\textsuperscript{420} Pen. Code, § 17, subd. (d)(1).
\textsuperscript{421} Gov. Code, § 41803.5, subd. (a).
\textsuperscript{422} Gov. Code, §6254.16.
that are discovered.\textsuperscript{423} In addition, any amount of growing or harvested cannabis in excess of two pounds, or the amount a medicinal cannabis patient or designated caregiver is authorized to possess, may be destroyed without a court order if certain requirements are satisfied.\textsuperscript{424}

Once the search is conducted, not only can state law be enforced, but municipal code violations can be addressed too. And enforcement is not limited to the criminal prosecution—violations discovered through the execution of a search warrant may also be addressed through the civil and administrative processes.

\textbf{PRACTICE TIP:} One strategy employed by some cities is to execute criminal search warrants on suspected illegal cannabis cultivation sites with peace officers and building inspectors. If an illegal grow is discovered, the plants and equipment may be seized and destroyed, and violators can be issued administrative penalty citations. More egregious cases (e.g. large-scale industrial grows, networks of residential grow houses) can be addressed with civil lawsuits or criminal prosecution.

\section*{III. ADMINISTRATIVE ENFORCEMENT}

\subsection*{A. Administrative Fines}

Cities may adopt an ordinance that makes violation of any ordinance in its municipal code subject to an administrative fine or penalty.\textsuperscript{425} Such an ordinance must establish administrative procedures that govern the imposition, enforcement, collection, and review by the city of those administrative fines.

The maximum allowable administrative fines for violations that would otherwise be infractions are: $100 for the first violation; $200 for the second violation that occurs within one year of the first; $500 for each additional violation that occurs within one year of the first.\textsuperscript{426} An administrative order to pay the fine may be appealed de novo before the Superior Court or by a writ petition under Code of Civil Procedure section 1094.5.\textsuperscript{427}

In addition to the general authority to adopt administrative fines and penalties, state law now provides an additional tool against illegal cultivation of cannabis. Cities may adopt an ordinance that immediately imposes an administrative fine for the violation of "building, plumbing, electrical, or other similar structural, health and safety, or zoning requirements, if the violation exists as a result of, or to facilitate, the unlicensed cultivation of cannabis.\textsuperscript{428} However, a city must allow for a reasonable amount of time to correct or remedy the violation if: (1) a tenant possesses the property that is subject to the fine, (2) the property owner can provide evidence that the rental lease agreement prohibits the cultivation of cannabis, (3) the landlord did not know the tenant was illegally cultivating cannabis, and (4) the landlord was not given actual notice of the unlicensed cannabis cultivation.

\begin{itemize}
\item Health & Saf. Code, § 11472
\item Health & Saf. Code, §11479.
\item Gov. Code, § 53069.4, subd. (a)(1).
\item Gov. Code, §§ 53069.4, subd. (a)(1), 36900, subd. (b). But see County of Los Angeles v. City of Los Angeles (1963) 219 Cal.App.2d 838, 844 (So long as penalty in validly enacted city ordinance does not exceed any maximum limits that are prescribed by its charter, as a freeholders’ charter, or Government Code section 36901 as to other cities which are governed by the general laws, than the penalty that is provided in the ordinance prevails.)
\item Gov. Code, § 53069.4, subd. (a)(2)(B).
\end{itemize}
through a complaint, property inspection, or other information.\(^{429}\)

This additional tool can be helpful for cities dealing with the proliferation of cannabis grow operations in residential neighborhoods. Previously, cities could impose administrative fines for violations of local ordinances pertaining to building, plumbing, electrical, or other similar structural issues that created no immediate danger to health or safety only after providing a reasonable time to cure the violations. Now, no opportunity to cure violations related to the unlicensed cultivation of cannabis is required unless all three criteria in Government Code section 53069.4, subdivision (a)(2)(C) are satisfied.

Given the strictly monetary nature of administrative fines as an enforcement tool, and the high value of each cannabis plant that is cultivated, cities may find that even repeated imposition of such fines against illegal cannabis businesses may fail to achieve compliance or closure. Cities may find that recalcitrant illegal operators are willing to pay the fine as the “cost of doing business” or simply ignore the process altogether, necessitating more extreme measures. In addition, it is sometimes difficult to identify the person who is actually cultivating the cannabis plants because they may only be at the location sporadically and often do not have identification.

---

\(^{429}\) Gov. Code, § 53069.4, subd. (a)(2)(C).

As mentioned earlier in this Guide, some personal cultivation is permitted under the AUMA. Although Government Code section 53069.4 defines “local agency” by reference to the Government Code section 54951 (the Brown Act), which includes “city, whether general law or chartered;” case law supports the argument that charter cities may impose different penalties. See Los Angeles County v. City of Los Angeles (1963) 219 Cal.App.2d 838, 844 (“So long as such penalty does not exceed any maximum limits prescribed by its charter ... the penalty provided in the ordinance prevails.”).
Part 5 — Enforcement Tools

Even with the proper administrative fines ordinance, the availability of administrative appeal rights, including seeking writ relief, could make this particular tool more cumbersome than other enforcement options. An ordinance with increased fine amounts will result in raising the stakes in the administrative appeals, and it will correspondingly increase the legal scrutiny of the process. The administrative appeals process should be carefully constructed and carried out to ensure that the enforcement efforts will withstand the litigation.

B. Administrative Abatement

1. Inspection Warrants

Cities may seek an inspection warrant to inspect a facility suspected of harboring unlicensed commercial cannabis activity for zoning or building and safety code violations. Inspection warrants issue upon the finding that either reasonable legislative or administrative standards for inspection are satisfied, or there is reason to believe the facility is out of compliance. Refusal to permit an inspection pursuant to an inspection warrant is a misdemeanor.

Inspection warrants can be an effective tool for cities to uncover a variety of potential violations at unlawful cannabis facilities. Once a violation is discovered, cities may then pursue abatement, through summary means if warranted. This assumes that the city has, by ordinance, declared the violation to be a nuisance, as it is broadly authorized to do under state law.

As with other remedies, inspection warrants can be combined with other approaches, such as administrative fines, if building code violations are discovered, which are subject to increased fines.

2. Abatement Warrants

An abatement warrant is an inspection warrant, as described above, that allows city staff to execute an abatement order that the city issued through its own administrative abatement procedures. There is no express statutory law regarding the issuance of abatement warrants; however, case law has clearly established that abatement warrants are properly issued pursuant to the statutory construct delineated for inspection warrants in the Code of Civil Procedure.

A city should carefully follow the procedures in its municipal code that authorize the city to abate. Following those procedures ensures the city complies with due process. The proposed abatement warrant should describe the city’s anticipated abatement actions with as much specificity as possible.

**PRACTICE TIP:** When seeking an inspection warrant or an inspection and abatement warrant be sure to identify all the city personnel that will be present during the inspection conducted under the warrant such as fire, police, building official, etc.

---

433 Gov. Code, § 38771.
434 Gov. Code, § 36900, subd. (c).
3. Summary Abatement

In addition to generally declaring zoning and other municipal code violations to constitute a nuisance per se, cities should expressly declare that unlicensed commercial cannabis activity constitutes a nuisance or that any operation in violation of its regulations is a public nuisance subject to abatement.

Summary abatement is an emergency abatement done without an abatement warrant or any administrative due process. Cities may establish procedures for the summary abatement of commercial cannabis facilities that constitute a nuisance and may attach liens against such facilities to account for abatement expenses. While summary abatement may be considered an inherent power of a city, ideally each city should have a code provision authorizing summary abatement.

Summary nuisance abatement is authorized in emergency situations involving the physical safety of the populace. It is also justified in situations involving exigent circumstances such as the destruction of evidence. Cities must be cautioned, however, that while they have broad authority to declare certain activity to be a nuisance, ultimately such a declaration may have to survive judicial scrutiny, even in the realm of unlawful cannabis activity.

If the circumstances warrant summary abatement, the question is what abatement acts are appropriate to address the violation. Cities should limit summary abatement to alleviating only imminently dangerous conditions. Summary abatement may include disposal of cannabis, the boarding up of property, or other alternative measures discussed later in this chapter.

Whenever a city exercises its summary abatement powers, due process requires that a city must provide the party responsible for the nuisance with a post-abatement hearing to contest the validity of the summary abatement. While many cities have a code provision authorizing summary abatement, most do not have clear procedures outlining the notice and hearing procedures to occur after completion of summary abatement.

Nuisance abatement procedures may also provide for the imposition of special assessments on unlicensed commercial cannabis facilities that constitute a nuisance. Cities may provide that the prevailing party at nuisance abatement proceedings are entitled to collect attorneys’ fees.

C. Notice and Order to Vacate (Also Known As, Red-Tagging)

If a city’s code enforcement officials determine that a commercial cannabis business is in violation of local or state building codes, and such violation(s) render the structure unsafe for human occupancy, then “red-tagging” may be warranted. Red-tagging is not specifically defined in state law, or in all local...
ordinances, but is generally understood to refer to a notice and order to vacate, and is often paired with an order to repair or demolish, as a means of abating the nuisance caused by the unsafe condition of the building.

The authority to red-tag is derived from both state and local law, with the latter based on cities’ well-established police power to enact and enforce ordinances to protect the public health, safety, and welfare of their residents. Standards relating to fire and life safety, structural safety, and access compliance are governed by the California Building Standards Code, which applies to all occupancies in California, along with local amendments adopted by state agencies and ordinances implemented by local jurisdictions’ governing bodies. In addition to setting forth notice requirements, Section 116.1 of the Building Code provides that structures that are “dangerous to human life or the public welfare or that involve illegal or improper occupancy or inadequate maintenance, shall be taken down and removed or made safe, as the building official deems necessary and as provided for in this section. A vacant structure that is not secured against entry shall be deemed unsafe.” (Emphasis added.) While this language does not expressly authorize local building officials to vacate a structure, it provides broad authority to order that structures be made safe, as deemed necessary.

The determination of whether a building is unsafe under California Building Code section 116.1 is within the discretion of the building official. Common conditions of a commercial cannabis business that may render it unsafe are unpermitted construction (especially unpermitted electrical modifications that pose an increased fire hazard), and ingress and egress blockages (including unapproved security doors that prevent emergency egress).

A red tag may also be issued in connection with revocation of a certificate of occupancy. California Building Code section 110.4 authorizes the building official to suspend or revoke a certificate of occupancy “where it is determined that the building or structure or portion thereof is in violation of any ordinance or regulation or any of the provisions of this code.” California Building Code section 110.1 provides that no building may be used or occupied until the building has a certificate of occupancy, meaning that upon revocation of a certificate of occupancy a building must be vacated. Further, Section 116.1 of the Building Code provides that structures that “involve illegal or improper occupancy...shall be...made safe, as the building official deems necessary and as provided for in this section.”

Statutory authority applicable to red-tagging unsafe structures can also be found in the Health and Safety Code. An enforcement agency is authorized to “institute appropriate action or proceeding to prevent, restrain, correct, or abate the [Building Code] violation or nuisance,” with less than 30 days’ notice if deemed necessary, in situations involving “an immediate threat to the health and safety of the public or occupants of a structure.” Whenever the enforcement agency has determined, after inspection, that the building is substandard, it is authorized to commence proceedings to abate the violation by repair, rehabilitation, vacation, or demolition of the building. Note that this provision expressly authorizes an order to vacate.

443 Health & Saf. Code, § 17980, subd. (a).
444 Health & Saf. Code, § 17980, subd. (c)(f).
Cities should also rely on their own applicable municipal code provisions when ordering that properties determined to be unsafe be vacated and secured. A city may adopt distinct red tagging procedures in its nuisance abatement ordinance or amend the aforementioned California Building Code authorities and procedures. Having an ordinance that makes failure to comply with an order to vacate a property deemed to be unsafe a misdemeanor can be a potent enforcement tool.

Whatever code sections are relied upon in issuing a notice of violation and order to vacate, it is important to ensure due process is afforded, even in an emergency situation.\textsuperscript{445}

\textbf{PRACTICE TIP:} Cities should not rely solely on notice requirements in the California Building Code (§§116.3-116.4) to ensure due process is afforded in the red-tagging process. Supplemental procedures, including hearing and appeal rights, should be enacted and followed.

\textbf{D. Disconnection of Utilities}

Cities may also consider alternative tools to gain compliance or prohibit unlawful cannabis business operations. One such tool may be the disconnection of utility services. Some cities, which have their own utilities department with water or power may consider turning off an unlawful cannabis business’ utility services if the city has a local ordinance providing such authority. However, some businesses may bring in generators or seek power from other sources to stay open. State law also authorizes disconnection of utilities “in case of emergency where necessary to eliminate an immediate hazard to life or property” or where the utility connection has been made without the required certificate of occupancy.\textsuperscript{446} As with any administrative provision in the California Building

\begin{itemize}
\item \textsuperscript{445} \textit{Wyss v. City of Hoquiam} (9th Cir. 2004) 111 Fed.Appx. 449, 451 (holding when immediate action is necessary to protect the public interest, such as when an unsafe nuisance is present, a hearing is not necessary prior to the exercise of police power as long as adequate post-deprivation procedural safeguards exist). See also \textit{Soranno’s Gasco, Inc. v. Morgan} (9th Cir. 1989) 874 F.2d 1310, 1318.
\item \textsuperscript{446} \textit{California Building Code}, § 112.3.
\end{itemize}
Part 5 — Enforcement Tools

Code, the authority to disconnect utilities can be amended or supplemented by ordinance.

**PRACTICE TIP:** An ordinance expressly authorizing this enforcement tool is advisable to provide notice to the utility subscriber. In other contexts, California law is clear that notice must be provided prior to turning off a utility service.447

E. Permit Modification, Suspension, or Revocation

Cities that allow and regulate commercial cannabis businesses typically issue licenses or permits, subject to requirements and restrictions specified by ordinance. Such requirements should be considered an essential part of an effective regulatory and enforcement system governing commercial cannabis activity at the local level, and are clearly within cities’ inherent authority, as recognized by MAUCRSA.448

Cities seeking to enforce their local license or permit requirements by modifying, suspending, or revoking the authorization based on non-compliance with those requirements should have an ordinance that establishes the process for doing so. In accordance with principles of due process, the ordinance should provide for notice regarding the nature of the violation and grounds for the proposed action (e.g., additional conditions, a monetary penalty, suspension, or revocation of the license), and afford an opportunity for a hearing. Depending on the severity or frequency of the violation(s), cities may be justified in seeking revocation, rather than a lesser form of discipline against the cannabis licensee. Absent a clear abuse of discretion, courts will generally defer to the city’s discretion regarding the level of punishment imposed.449

Aside from local cannabis licenses or permits, it may be possible and prudent to revoke, suspend, or modify other city approvals, licenses, or permits. For example, the operation of a non-compliant cannabis business by a tenant may be a basis to take action against the business license or a conditional use permit for the property. A property owner may decide to take action to eject a tenant or otherwise cooperate with the city’s efforts in order to avoid the revocation, suspension, or modification. Depending on the level of involvement or culpability of the property owner for the illegal activity, these may be additional means of placing pressure on a bad actor.

**PRACTICE TIP:** While cities are afforded broad discretion in determining the appropriate penalty for license violations, a decision to impose severe discipline is more likely to be upheld if preceded by unsuccessful attempts to gain compliance or other aggravating factors. For instance, if the totality of circumstances includes warning

---

447 Pub. Util. Code, §§ 10010, 10010.1 (notice required by a public utility prior to termination of light, heat, water, or power for a delinquent account). But see Goldin v. Public Utilities Commission (1979) 23 Cal.3d 638, 664, (addressing discontinuation of telephone service involving illegal activity, without notice to the subscriber, upon a finding of probable cause by a magistrate; “...the rule should provide at the least that in order to justify summary action the magistrate must find that there is probable cause to believe not only that the subject telephone facilities have been or are to be used in the commission or facilitation of illegal acts, but that the character of such acts is such that, absent immediate and summary action in the premises, significant dangers to public health, safety, or welfare will result.”).

448 Bus. & Prof. Code, § 26200, subds. (a)–(b) (providing in part that MAUCRSA shall not be interpreted to supersede or limit the authority of a local jurisdiction to adopt and enforce local ordinances to regulate businesses licensed under MAUCRSA, including “business license requirements,” nor to supersede or limit existing local authority to enforce “local license, permit, or other authorization requirements.”)

449 Coe v. City of San Diego (2016) 3 Cal.App.5th 772, 790 (“In reviewing the severity of the discipline imposed, we look to the correctness of the agency’s decision rather than that of the trial court. The penalty imposed by an administrative body will not be disturbed in mandamus proceedings unless an abuse of discretion is demonstrated.” (Citations omitted.))
letters, or attempts by the cannabis business licensee to avoid detection of violations, it is unlikely a court would deem revocation an abuse of discretion.\textsuperscript{450} Cities should generally avoid “accumulating” violations in order to impose a more severe penalty than applicable to a first offense under governing regulations. In a case involving an ABC licensee, Walsh v. Kirby,\textsuperscript{451} this practice was found to violate both applicable statutory authority and due process. The court stated, “Petitioner complains of a practice whereby the department accumulated evidence of recurring sales of distilled spirits below established minimum retail prices, each sale constituting a different but essentially identical violation, before it filed its accusation charging the licensee with the whole series of violations and assessing concomitant cumulative penalties. Such practice, petitioner contends among other things, constitutes an arbitrary exercise of the statutory grant of authority and offends due process limitations. We agree and annul the imposition of cumulative penalties in the instant circumstances.” The Walsh court noted, however, that it expressed no view on whether such a practice “would be arbitrary if exercised against a licensee who, the record would show, was a habitual offender and unwilling to conform.”\textsuperscript{452}

F. State Law Administrative Enforcement

Each of California’s three licensing agencies (Bureau of Cannabis Control, California Department of Food and Agriculture and California Department of Public Health) were empowered to issue a citation to a licensee or unlicensed person for any violation of MAUCRSA or its implementing regulations, however, after July 12, 2021, the DCC is the enforcement agency.\textsuperscript{453} MAUCRSA establishes the basic elements of the associated administrative process, including provisions requiring the licensing authority to follow specified notice and hearing requirements, and consider certain factors in assessing administrative fines. The potential fines are steep: up to $5,000 per violation by a licensee and up to $30,000 per violation by an unlicensed operator. Additionally, any person engaging in commercial cannabis activity without a license is subject to civil penalties of up to three times the amount of the license fee for each violation, and the court may order the destruction of cannabis associated with that violation in accordance with Section 11479 of the Health and Safety Code.\textsuperscript{454}

This enforcement mechanism has the potential to be a highly effective tool against illicit cannabis business and non-compliant licensees. Its actual effectiveness, however, will depend on the state’s resources to issue and follow through on citations as part of a broader enforcement strategy. That strategy has included coordination with local law enforcement as well as other state entities, such as the California Department of Tax and Fee Administration (CDTFA), in various enforcement efforts. The state may likewise seek to partner with local authorities in exercising its citation authority under Business and Professions Code section 26031.5.

APPENDIX I | Criminal Enforcement of Misdemeanors

FIELD CITATION VERSUS COMPLAINT FOR ARREST WARRANT

There are generally two ways to file a misdemeanor case and bring the defendant into court: issuance of a citation or the filing of a long-form criminal complaint.

<table>
<thead>
<tr>
<th>Issuance of Citation</th>
<th>Long-Form Criminal Complaint</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offense must have been viewed in the presence of the officer. 455</td>
<td>Offenses do not need to be committed in officers’ presence and complaint may be employed when the property owner or business owner/entity are the defendants. 458</td>
</tr>
<tr>
<td>California law limits who can be arrested and booked, rather than immediately issued a citation and released. 456</td>
<td>Preparation of long-form complaint can assist the prosecuting attorney in identifying issues and making certain tactical decisions, including who to charge, what violations to charge, and how many counts to allege, etc.</td>
</tr>
<tr>
<td>A defendant may be arrested where: “There was a reasonable likelihood that the offense or offenses would continue or resume, or that the safety of persons or property would be imminently endangered by release of the person arrested.” 457</td>
<td></td>
</tr>
</tbody>
</table>

In general, the method of initiating the case tends to depend on the target of the investigation, with citations being issued in-person to violators found at the location and complaints being used for other defendants.

A key to permanently abating illegal activity is to prosecute those that are most directly and ultimately responsible for the criminal activity. As such, it is critical to tailor the approach of the prosecution to the defendants who are responsible for the illegal activity.

Business Entity Defendants
Warrants may be used to obtain business records that may disclose the owners or operators. Obtaining and executing search warrants require the participation and cooperation of law enforcement, which cities will have to varying degrees. An inspection warrant can be a useful evidence gathering tool where there is insufficient evidence to obtain a warrant or where law enforcement is not leading the investigation. 459

455 Pen. Code, § 836.5, subd. (a).
456 Pen. Code, § 853.6, subd. (i).
457 Pen. Code, § 853.6, subd. (i)(7).
◆ **Property Owner** – A property owner may have an interest in the cannabis activity or may simply be allowing the illegal activity to occur. Often property owners collect above-market rent in exchange for allowing the illegal activity to continue. Before filing a criminal complaint against a property owner with no other ascertainable connection to the illegal activity, it is necessary to first put the property owner on notice.

◆ **Employees** – Prosecution of only employees may lead to an illegal business reopening, with new employees being hired who are unaware of prior arrests.

### RESOLUTION OF CRIMINAL PROSECUTION

The primary advantage of a misdemeanor prosecution is placing the defendant on one, two, or three years of summary probation subject to specific terms and conditions related to the violation committed. Because defendants often reoffend, reducing misdemeanors to infractions is not recommended. Pursuing a misdemeanor plea ensures probation is possible. Conditions of probation may include orders to abate outstanding violations and to prevent the recurrence of violations. At a minimum, every probation includes the condition that the defendant must “obey all laws.”

A defendant who violates a condition of probation is subject to the revocation of his or her probation, and to the imposition of additional sanctions. If the defendant violates any term or condition of probation at any time during the probationary period, the defendant may be rearrested, have additional fines imposed, or have additional conditions placed upon the probation. Though jail time is not common, jail time may be imposed by a court where a defendant’s actions are egregious or where the defendant has repeatedly violated terms and conditions of probation imposed by the court.

462 Pen. Code, § 1203.2.
Glossary

AUMA: Adult Use of Marijuana Act, adopted by California voters as Proposition 64 effective November 9, 2016.

BSA: Bank Secrecy Act. The BSA requires US financial institutions to assist federal agencies to detect and prevent money laundering.

Bureau or BCC: Bureau of Cannabis Control, formerly Bureau of Marijuana Control, formerly Bureau of Medical Marijuana Regulation. The Bureau is within the Department of Consumer Affairs (DCA). The Bureau governs all state licenses relating to commercial cannabis other than those governed by CDPH and CDFA. (Bus. & Prof. Code §26012.)

CBD: Cannabidiol, an extract from cannabis plants.

CDD: Customer Due Diligence. FinCEN’s guidelines under the BSA include best practices for CDD.

CDFA: California Department of Food & Agriculture. CDFA governs state licenses for commercial cultivation of cannabis. (Bus. & Prof. Code §26012.)

CDFTA: California Department of Tax and Fee Administration. CDFTA determines certain tax rates relating to commercial cannabis. Cannabis retailers, cultivators, manufacturers, and distributors must also register with CDTFA.

CDFW: California Department of Fish & Wildlife. CDFW provides input to CDFA on conditions relating to the cultivation of cannabis. (Bus. & Prof. Code §26060(c).)

CDPH: California Department of Public Health. CDPH governs state licenses for commercial manufacturing of cannabis. (Bus. & Prof. Code §26012.)

CEQA: California Environmental Quality Act. (Public Resources Code §§21000 et seq.)

CSA: Controlled Substances Act (21 USC §§810 et seq.)

CUA: Compassionate Use Act of 1996 adopted by California voters as Proposition 215 effective November 6, 1996. (Health & Safety Code §§11362.5 et seq.)

DCA: Department of Consumer Affairs. The Bureau is within DCA.

DCC: Department of Cannabis Control, created by AB 141 in July 2021.

DPR: Department of Pesticide Regulation. DPR helps develop guidelines for the use of pesticides in the cultivation of cannabis and residue in harvested cannabis.

Day Care Center: “[A] child day care facility other than a family day care home, and includes infant centers, preschools, extended day care facilities, and schoolage child care centers, and includes child care centers licensed pursuant to Section 1596.951.” (Health & Safety Code §1596.76.) Certain locational restrictions relate to day care centers.

FDA: US Food and Drug Administration. The FDA regulates CBD and THC if used as a food or drug additive for humans and animals.
FDB: Food and Drug Branch, within the California Department of Public Health. FDB regulates the topical and ingestible forms of hemp-based CBD.

FinCEN: Financial Crimes Enforcement Network, within the US Department of the Treasury. FinCEN has issued guidelines relating to cannabis-related financial transactions.

Hemp: Hemp and cannabis are the same plants, with hemp plant defined as having less than 0.3% THC. (Health & Safety Code §11018.5(a).)

MCSB: Manufactured Cannabis Safety Branch, within the California Department of Public Health. MCSB regulates the manufacture of cannabis.

MMIC: Medical Marijuana Identification Card. An MMIC indicates the holder is a qualified patient or the primary caregiver for a qualified patient and is exempt from sales and use taxes since the cannabis is for medicinal use. (Rev. & Tax. Code §34011(a)(1).)

MMRSA: Medical Marijuana Regulation and Safety Act. MMRSA was enacted in 2015 but was repealed by MAUCRSA.

SARs: Suspicious Activity Reports. A US financial institution must issue a SARs for certain types of financial transactions.

SWRCB: State Water Resources Control Board. SWRCB provides input to CDFA on conditions relating to the cultivation of cannabis. (Bus. & Prof. Code §26060(c).)

THC: Tetrahydrocannabinol, an extract from cannabis plants.

Youth Center: “[A]ny public or private facility that is primarily used to host recreational or social activities for minors, including, but not limited to, private youth membership organizations or clubs, social service teenage club facilities, video arcades, or similar amusement park facilities.” (Health & Safety Code §11353.1(c)(2).) Certain locational restrictions relate to youth centers.
